WIRELESS PRESSURE MONITORING 2.1 (WPM)

WIRELESS MONITORING OF GAS SPRINGS VIA BLUETOOTH LE 4.0

THE CORE REQUIREMENTS OF PRESS PLANTS ARE: AUTOMATION AND ZERO-ERROR MANUFACTURING. THE FIBRO WIRELESS PRESSURE MONITORING SYSTEM 2.1 (WPM), MONITORS GAS SPRINGS IN ALL AREAS, IN WHICH CABLE- OR HOSE CONNECTED SENSORS REACH THEIR TECHNICAL LIMITATIONS, OR ARE SIMPLY UNECONOMICAL.

The WPM system monitors the pressure and temperature in gas springs. It consists of a data part (optional) and sensors which transmit their data wirelessly to a WPM repeater integrated into the company network. Custom software analyses the data and initializes the necessary process control and preemptive maintenance steps accordingly.

FIBRO, with the WPM system for the fourth industrial revolution,

provides a product and technology that supports concepts of intelligent processes and networked machines/tools.

ADVANTAGES

- Around-the-clock monitoring and documentation
- Early warning signalling prevents the production of unacceptable parts
- Preemptive wear detection and targeted troubleshooting
- Prevention of downtime and secondary failures
- Minimization of leakage points
- Streamlined construction and assembly
- Reduced maintenance and repair costs thanks to needs-optimised maintenance intervals

COMPONENTS OF THE WPM SYSTEM

- Sensors in the tool
- Data part (optional)
- WPM Repeater
- Fieldbus coupler (optional)
- WPM Cloud Software
- WPM app (optional)

WIRELESS PRESSURE MONITORING 2.1 (WPM) FOR INDUSTRY 4.0 (IOT)

METHOD OF OPERATION

DETERMINE VALUES VIA BLUETOOTH

Sensors in the tool transmit the pressure and temperature values in the gas springs wirelessly.

MANAGE DATA

When using the WPM app, the data part manages the data of the tool sensors (optional).

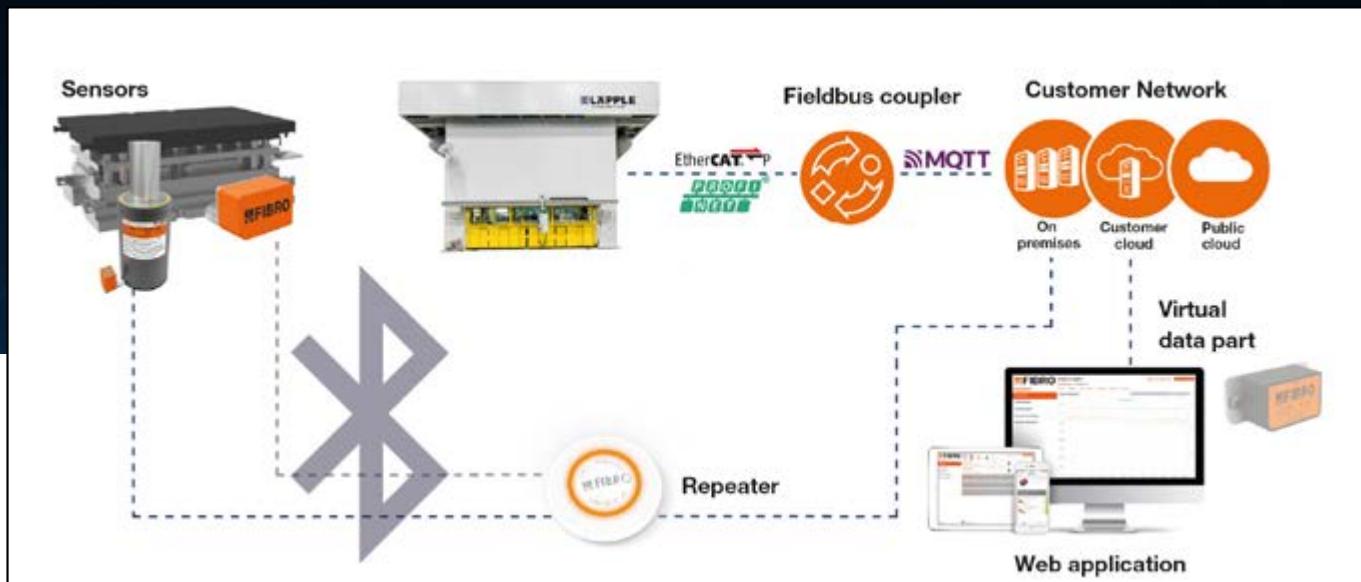

COLLECT AND TRANSFER DATA

The FIBRO WPM repeater receives the data from the sensors and passes it on to the WPM cloud software. It establishes communication in all areas where you want to monitor your tools.

COMMUNICATION FOR CONTROL

The fieldbus coupler acts as an interface between the WPM cloud software and the system control of a power press or press line. It translates the MQTT protocol into an EtherCat or Profinet protocol and thus enables error-free communication within your systems.

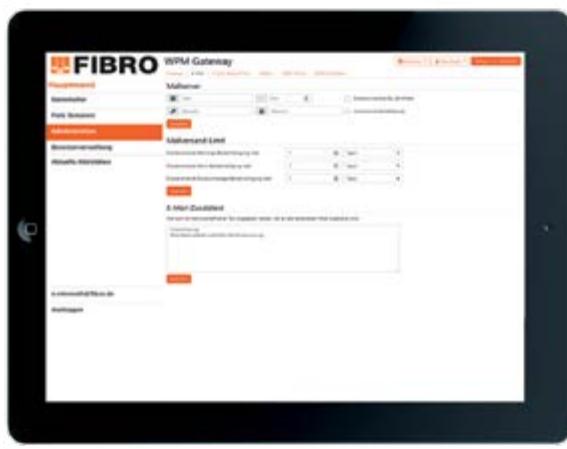

WEB-BASED SOFTWARE FOR SETTING UP AND EVALUATING THE SENSORS

The WPM system monitors the gas springs for error-free production before and during the use of the tool in the press.

WPM CLOUD SOFTWARE

The WPM cloud software manages and controls your tools centrally and across locations. Installed on your server, you can create different plants or even different production areas such as press shop, maintenance workshop, warehouse or tool shop.

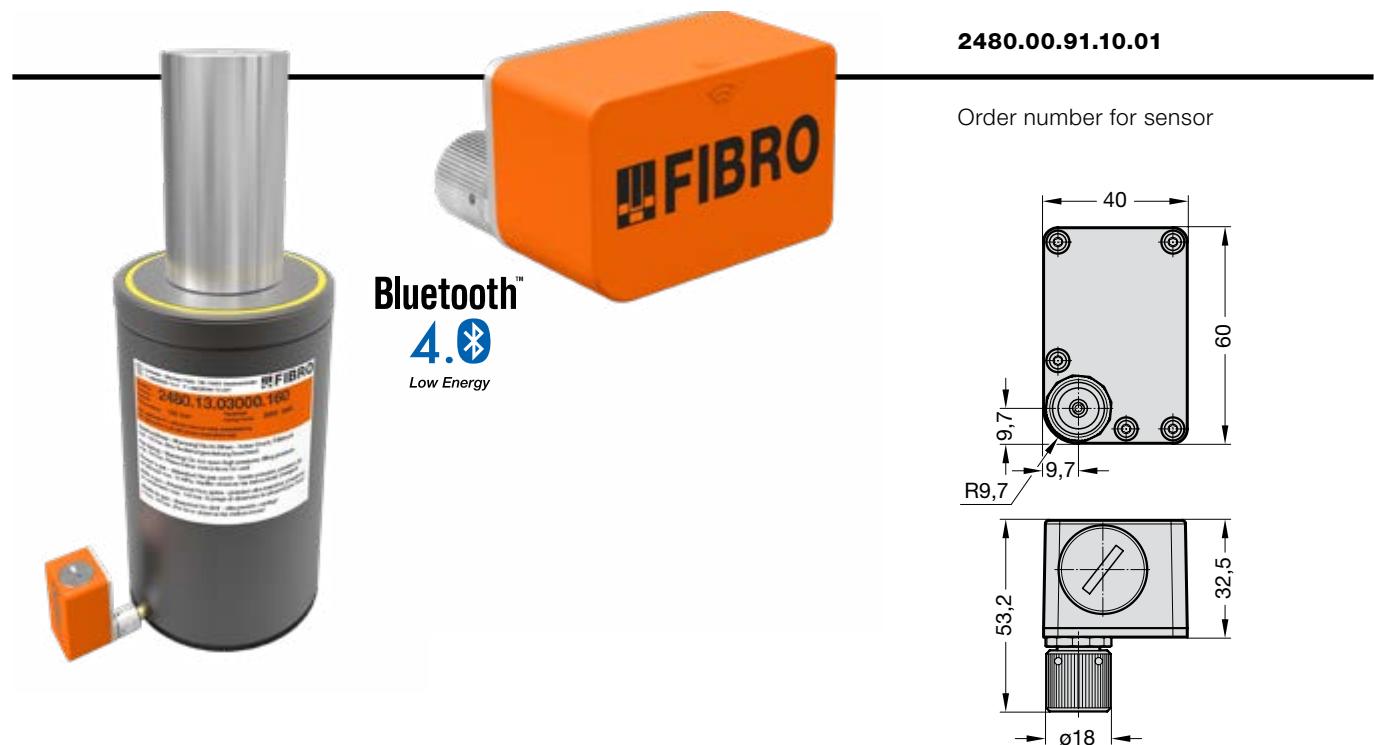

MOBILE APP

The WPM app is used to display the status conditions (pressure and temperature). It is available for download in the App Store, Google Play and on the FIBRO website.

www.fibro.com

WIRELESS PRESSURE MONITORING 2.1 (WPM) SENSOR, BATTERY

DESCRIPTION

The sensor is battery operated and thus wireless.

In operating mode, the sensor cyclically transmits data via Bluetooth LE 4.0 to the WPM repeater or the mobile WPM app. The mechanical construction is designed according to the requirements of the press (shock- and vibration-resistant).

The data transmission during the programming of the sensor is encrypted.

The following data are queried:

- Limit values for pressure and temperature
- Part number (tool number)
- Part ID
- Sensor ID
- Position in the tool
- Various cycle times
- Battery status
- Transmission power

TECHNICAL SPECIFICATIONS

- Housing: plastic
- Base plate: Aluminium
- Minimess connection: Steel galvanised M12.65 x 1.5 FEM
- Pressure measuring range: 0 – 500 bar relative
- Precision: ± 2 bar
- Temperature measuring range: 0 °C to 85 °C
- Battery: Lithium Li-SoC12 2 / 3 A 3.6 V
- Signal transmission: Bluetooth LE 4.0
- Protection type: IP65 sealed with adhesive and screwed
- Operating temperature range: 0 °C to 80 °C

2480.00.91.10.00.1

Order number for battery reorder

(Battery is included with the sensor.)

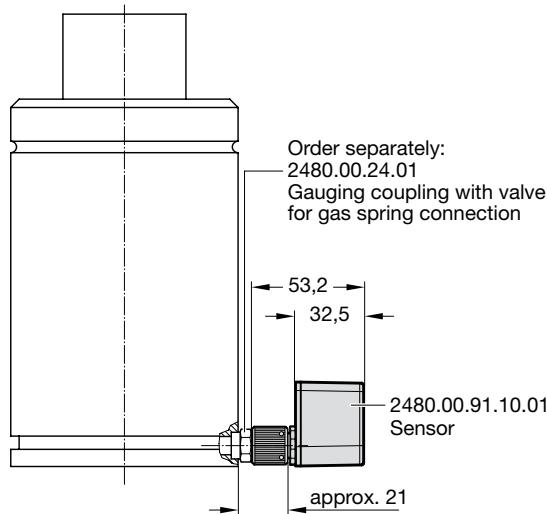

Battery capacity 3 – 4 years for “normal” tool use

WIRELESS PRESSURE MONITORING 2.1 (WPM)

SENSOR, GAUGING COUPLING, FILLING ADAPTER

WIRELESS PRESSURE MONITORING 2.1 (WPM) DATA PART, BATTERY

2480.00.91.30

Order number for data part

DESCRIPTION

A data part is installed in the tool when using the WPM app. It stores all the tool data, as well as a list of all sensors that are found on the tool.

Up to 128 sensors can theoretically be managed in one tool. Via the CHECK button, the Data part can perform a quick tool scan (sensor condition such as pressure, battery and reception) with all the pressure sensors in the simplest manner.

The data part receives the connection with the Mobile WPM app and transmits its tool data.

NOTE

The tool data can be managed as a "virtual" data storage device in the cloud software. As a result, the data storage device 2480.00.91.30 is not mandatory for the cloud application.

2480.00.91.10.00.1

Order number for battery reorder

(2 batteries are included with the Data part.)

Battery capacity 3 – 4 years for "normal" tool use

TECHNICAL SPECIFICATIONS

- Housing: plastic
- Base plate: Aluminium
- Battery compartment cover: Aluminium
- Signal transmission: Bluetooth LE 4.0
- Protection type: IP65 sealed with adhesive and screwed
- Operating temperature: 0 °C to 60 °C

ADVANTAGES

- Wireless pressure monitoring
- Tool data are always available on the tool
- Data evaluation by gateway, PC (WPM software) or both possible in parallel
- Quick access to sensor data via short Bluetooth LE 4.0 cycle times
- Fast tool check by pressing a button on the data part with optical evaluation.

WIRELESS PRESSURE MONITORING 2.1 (WPM) REPEATER

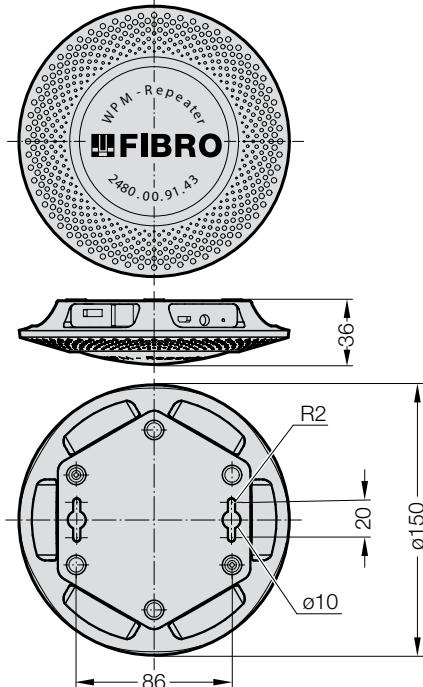

**Bluetooth™
4.0
Low Energy**

2480.00.91.43

Order number for Repeater

DESCRIPTION

The FIBRO WPM-Repeater 2480.00.91.43 establishes the communication with the sensors as well as the data storage device (optional) in which the tools are to be monitored.

The FIBRO WPM Repeater 2480.00.91.43 is a Bluetooth Low Energy (BLE) to WiFi connector. It collects the data from the WPM sensors and WPM storage devices and then sends it via MQTT protocol over WiFi or Ethernet to the WPM Cloud software 2480.00.91.53, which is installed on a local server or remote cloud server.

The FIBRO WPM Repeater is equipped on the top with a coloured light ring for status indications. It can be fastened by means of the screw mounts on the backside.

Mounting screws and a drill jig are included.

The mounting of the repeater should be vertically. Wall mounting is therefore preferable to ceiling mounting.

NOTE

The WPM Repeater 2480.00.91.43 can only be operated in conjunction with the WPM Cloud Software 2480.00.91.53!

TECHNICAL SPECIFICATIONS

- Housing: Plastic, white
- Dimension: Ø150 mm x 36 mm
- Weight: 180 g
- Operating temperature range: -25°C up to 65°C
- Air humidity: max. 95% non-condensing
- Power supply: DC 5V
- with Micro USB: 330 mA
- Frequency band: 2,4 GHz
- Range: 25 - 50 m (Free field)

SUPPLIED COMPONENTS

WPM Repeater, 1x Micro-USB cable, power supply, mounting screws with jig

WIRELESS PRESSURE MONITORING 2.1 (WPM) FIELDBUS COUPLER ETHERCAT

MQTT EtherCAT®
Technology Group

DESCRIPTION

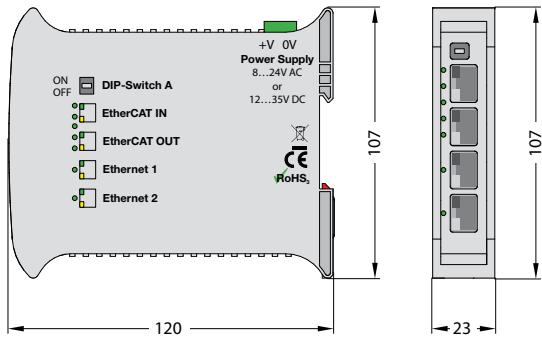

By integrating the fieldbus coupler, EtherCAT 2480.00.91.44.1, the WPM Cloud application 2480.00.91.53. can be connected to the power press control (EtherCAT). The EtherCAT fieldbus coupler 2480.00.91.44.1 enables EtherCAT communication with the WPM system, connecting an EtherCAT master (e.g. a Beckhoff PLC, OMRON PLC, etc.) to the WPM cloud application 2480.00.91.53. The communication from network coupler to WPM-Cloud (MQTT) can be encrypted with TLS/SSL, which ensures a SECURE communication.

SYSTEM REQUIREMENTS

One fieldbus coupler is required for each power press control. The fieldbus coupler is connected to the WPM Cloud application via Ethernet (port 1883). Additional ports are required for configuration (80/443).

2480.00.91.44.1

Order number for EtherCAT fieldbus coupler

TECHNICAL SPECIFICATIONS

Housing: plastic PVC
Connections: 4xEtherNET
EtherNET protocol: MQTT
EtherCAT protocol: EtherCAT Slave
Data rate MQTT: 10/100 Base-T Autosensing
Data rate EtherCAT: 10/100 Base-T Autosensing
MQTT Connector: RJ45
EtherCAT Connector: RJ45
Power connection: 2way 5mm terminal block
Power supply: 8..24V AC; 12..35V DC
Operating temperature range: -40°C/+85°C
Dimensions (LxWxH): 120x23x107
Weight: approx. 200g
Fastening: DIN rail

WIRELESS PRESSURE MONITORING 2.1 (WPM) FIELDBUS COUPLER PROFINET

MQTT PROFINET®
NET

DESCRIPTION

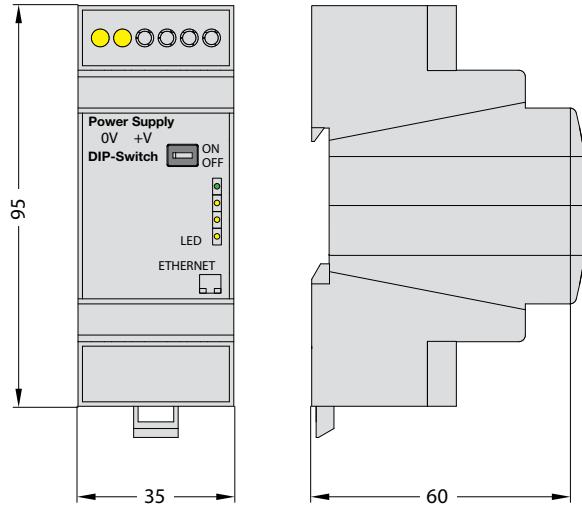

By integrating the fieldbus coupler, PROFINET 2480.00.91.44.2, the WPM Cloud application 2480.00.91.53. can be connected to the power press control (PROFINET). The PROFINET 2480.00.91.44.2 fieldbus coupler enables PROFINET communication with the WPM system, connecting a PROFINET master (e.g. SIEMENS PLC, Supervisory PLC, etc.) with the WPM cloud application 2480.00.91.53. The communication from network coupler to WPM-Cloud (MQTT) can be encrypted with TLS/SSL, which ensures a SECURE communication.

SYSTEM REQUIREMENTS

One fieldbus coupler is required for each power press control. The fieldbus coupler is connected to the WPM Cloud application via EtherNet (port 1883). Additional ports are required for configuration (80/443).

2480.00.91.44.2

Order number for PROFINET fieldbus coupler

TECHNICAL SPECIFICATIONS

Housing: plastic PVC
 Connections: 1xEtherNET
 EtherNET protocol: MQTT
 PROFINET protocol: PROFINET Slave
 Data rate MQTT: 10/100 Base-T Autosensing
 Data rate EtherCAT: 10/100 Base-T Autosensing
 MQTT Connector: RJ45
 PROFINET Connector: RJ45
 Power connection: 2way 5mm terminal block
 Power supply: 8..24V AC; 12..35V DC
 Operating temperature range: -40°C/+85°C
 Dimensions (LxWxH): 36x60x95
 Weight: approx. 200g
 Fastening: DIN rail

WIRELESS PRESSURE MONITORING 2.1 (WPM) WPM CLOUD SOFTWARE

THE WPM 2.1, LIKE ITS PREDECESSOR, WIRELESSLY MONITORS THE PRESSURE AND TEMPERATURE OF YOUR FIBRO GAS SPRINGS IN THEIR INSTALLED STATE. SENSORS WITHIN THE TOOL SEND DATA VIA BLUETOOTH TO THE REPEATER. THE REPEATER THEN TRANSMITS THIS DATA WIRELESSLY OR VIA LAN TO THE CLOUD-BASED SOFTWARE INSTALLED ON THE COMPANY SERVER. THE SPECIALLY DEVELOPED SOFTWARE ANALYZES THIS DATA AND TRIGGERS APPROPRIATE ACTIONS.

DESCRIPTION

The enhanced version 2.1 offers additional features that bring your production a big step closer to Industry 4.0:

The cloud-based solution makes it possible to monitor multiple tools at the same time – even across locations and sites. The Bluetooth range is therefore no longer a limiting factor.

Installing the Cloud on your internal company server reliably implements the absolute security of your sensible data.

Most accurate analyses of collected data allow an even more precise process control and an optimized preventive maintenance.

The future performance of the system can be enhanced by the option to add modular extensions with additional sensors.

An easy and intuitively user interface simplifies the operation, configuration and maintenance of the system and thereby helps prevent errors.

Additional functions such as the assignment of specific gas springs for simplified display of obtained values make the system even more user-friendly. The ordering of spare parts is thereby also possible automatically via our online store.

2480.00.91.53.

Order number for the WPM Cloud software

SYSTEM REQUIREMENTS

The software requires a Linux base system with Docker installed. A WPM server must meet the following requirements:

- Working memory: at least 4GB, recommended 8GB
- Hard disk space: at least 64GB
- Processor: No special requirements
- Operating system: Ubuntu 20.04 (other distributions are possible, but without support)
- Docker version 20.10.8 or higher
- Internet access via port 443 must be provided at least for the installation
- A network connection between the server, the WPM gateways (network couplers) and WPM Repeaters must be possible via port 8883

THE WPM CLOUD SOFTWARE IS OFFERED ON A LICENSE MODEL:

2480.00.91.53.005 - 5 licenses

2480.00.91.53.010 - 10 licenses

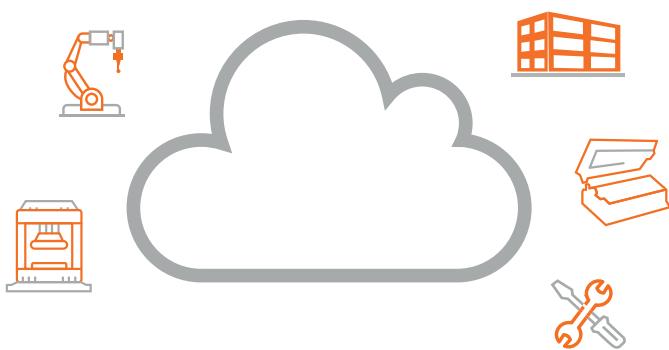

2480.00.91.53.025 - 25 licenses

2480.00.91.53.100 - Unlimited licenses

One license is required per WPM Repeater or network coupler. This allows for optimal tailoring to your monitoring requirements.

WIRELESS PRESSURE MONITORING 2.1 (WPM)

YOUR ADDED VALUES

PROACTIVE MAILING FUNCTIONS

STORAGE FOR SENSOR DATA

**CLOUD INTEGRATION
OPTION**

CROSS-PLATFORM

**CROSS-MANUFACTURER
SYSTEM INTEGRATION**

**STANDALONE
COMMUNICATION**

**TREND DETECTION /
DATA ANALYSIS**

REMOTE ACCESS

ADVANTAGES:

- Setup and configuration of the tool sensors and the data part
- Trend detection and data analysis of the pressure and temperature gradients
- Proactive mailing functions to the user
- Option for integration into the press control system (as well as Beckhoff PLC and the Siemens PLC)
- Platform-independent web interface
- On Premise Integration into the company network locally at the customer's site
- Customer Cloud Integration
- Interface to the system network/company network via: EtherCat, Profinet, OPC-UA, Ethernet/WLAN/LAN, MQTT

WIRELESS PRESSURE MONITORING 2.1 (WPM) CLOUD USER INTERFACE, IOT

SIMPLE CONFIGURATION OF THE SYSTEM

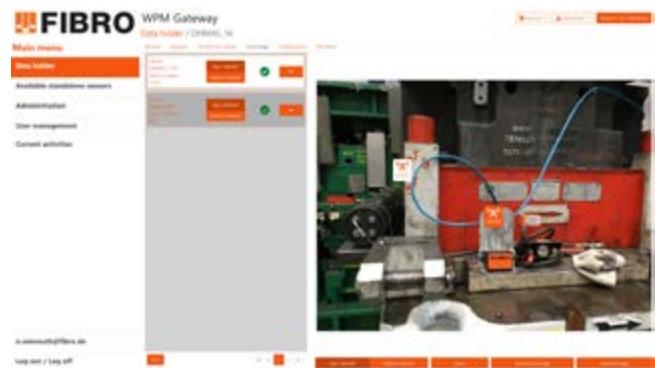

Setting and display of actual and setpoint values for pressure and temperature of the sensors in the tool via web-based user interface.

PRODUCE ERROR-FREE

Before and during the use of tools in the press, the WPM monitors the level of pressure of all gas springs. The system reports issues before the production of unacceptable parts can occur. Adjustable warning and alarm value limits.

Via trend detection and data analysis, the user is informed by email when the set limit values are not reached.

POSITION AND STATUS CONTROL OF THE GAS SPRING SENSORS IN THE TOOL

System locates defective spring in case of malfunction.

TARGETED MAINTENANCE

Temperature monitoring can detect wear and tear even before a pressure drop in the spring. This significantly reduces the effort required for upkeep and maintenance compared to rigid intervals.

STREAMLINED CONSTRUCTION AND ASSEMBLY

Tool manufacturers only need to consider the position of sensors and springs. No need to install tube lines during assembly which means leakages are a thing of the past.

DOCUMENTATION OF THE PROCESS CONTROL (PRESSURE / TIME DIAGRAM)

Pressure and temperature data are acquired and recorded throughout the entire production process, but also, for example, in the warehouse or during maintenance.

WIRELESS PRESSURE MONITORING 2.1 (WPM) EXAMPLE APPLICATION AND INSTALLATION

INSTALLATION OF SENSORS

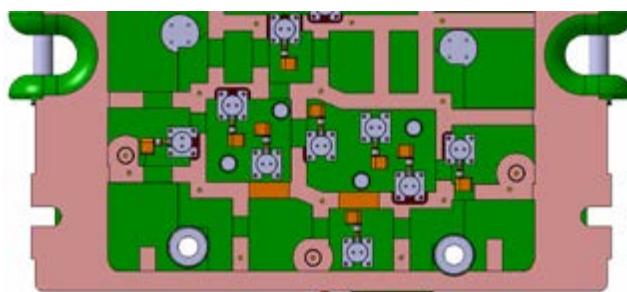

The sensors should ideally be connected directly to the gas pressure spring by means of the G1/8 Minimess coupling. Alternatively, they can be attached to a control panel (hose or manifold system). When attaching to a control panel, temperature monitoring of individual gas springs is not possible.

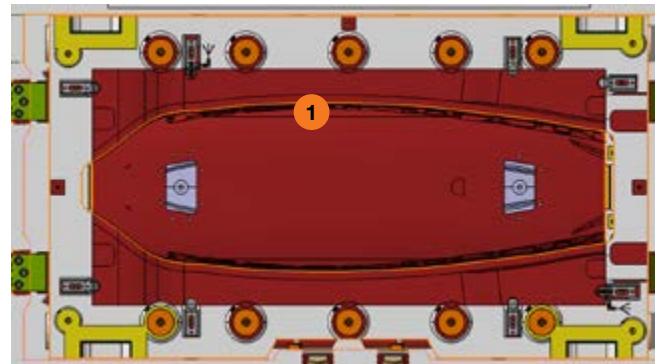

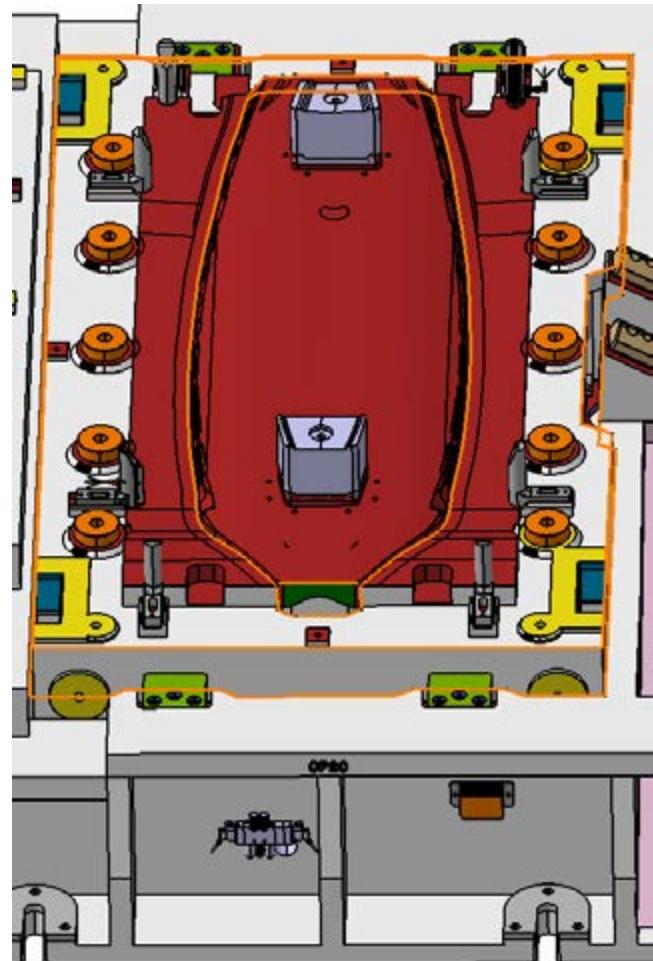

Connection of sensors directly to gas pressure springs

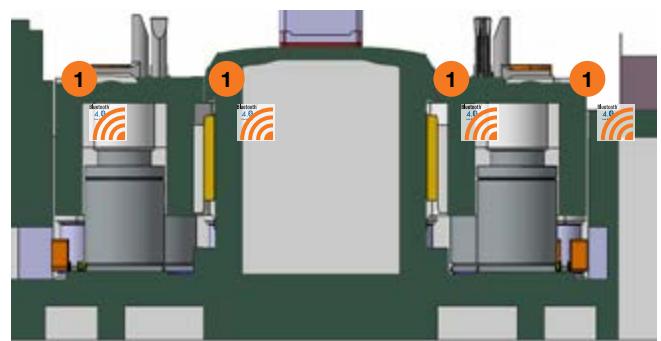

Attachment of sensor to control fitting for monitoring the composite system

Caution: To avoid impairment of the radio transmission, there must be sufficient openings in the tool near sensors. Slotted openings with a minimum length of 50 mm are recommended. The width is freely selectable ($> 0.2\text{mm}$).

1) Slotted openings for radio transmission

WIRELESS PRESSURE MONITORING 2.1 (WPM) EXAMPLE APPLICATION AND INSTALLATION

INSTALLATION OF DATA PART (OPTIONAL)

A data part can be installed on any tool (e.g. for using the mobile WPM app). It stores all the tool-specific data, as well as a list of all sensors that are found on the tool. Up to 128 sensors can be managed in one tool.

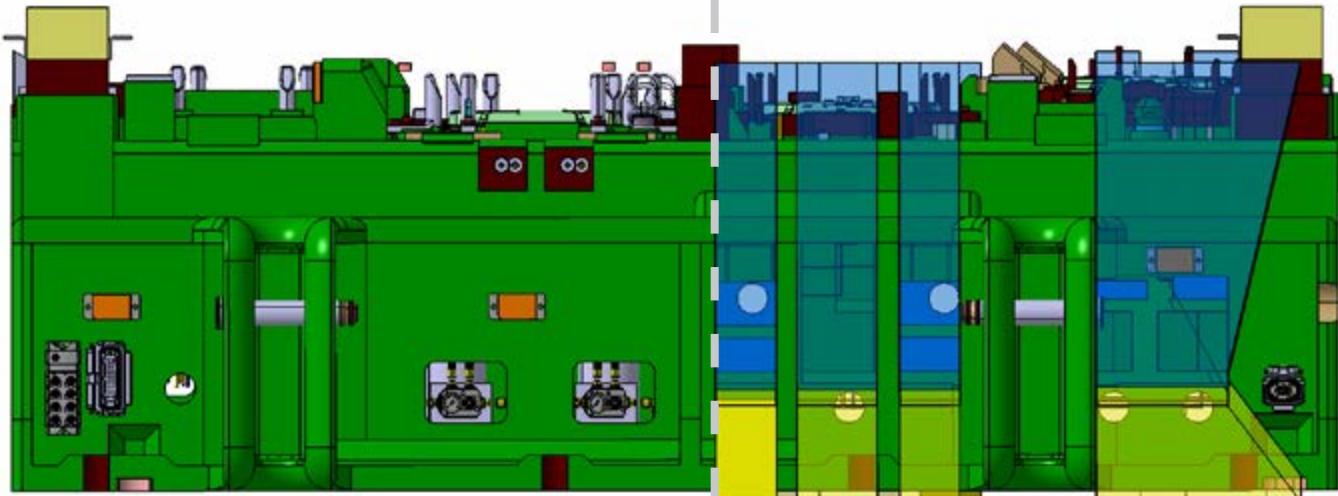

The attachment of the data part should ideally take place in the UT. The data part must be freely accessible to be able to press the query button (Check button) and tool change-over button (LOGIN button).

Possible installation position for data part

No free accessibility to the data part

INSTALLATION OF WPM REPEATER

The WPM repeater collects the data from the sensors and data storage devices and forwards it to the WPM cloud software via WiFi or Ethernet. The software evaluates the data and initiates appropriate measures such as warning messages or power press stops.

In order to warranty continuous monitoring, the sensor signals must have good reception.

The repeater should, therefore, be placed so that there is a good wireless connection to the sensors in the tool.

The reception range of the repeater is between 25–50 m. The mounting of the repeater should be vertically. Wall mounting is therefore preferable to ceiling mounting. A power supply and possibly a network connection are required.

The best wireless coverage is achieved via a diagonally offset arrangement. For monitoring the power press and for programming of the sensors, the repeater should be placed in the immediate vicinity of the tool (5–10 m).

NOTE:

Installation in the control equipment cabinet is not possible due to the shielding of the metal box!
Do not mount the repeater inside the power press (not protected against splash water)!
