## Flex Cam

### General

System safety, reliability and functionality can be ensured by supplying FIBRO with the application data and drawings of the installation arrangements for checking.

Please note that the number of the threaded connections and the hose lengths for installation in the system must be determined.

**Assembly, commissioning, maintenance and servicing of the Flex Cam system require special knowledge and may only be carried out by FIBRO trained, specialist personnel.**

You can order the work to be carried out by a FIBRO customer service engineer, to be invoiced in accordance with our installation tariff.

Just contact us to schedule it for you.

We shall be pleased to answer any technical queries you may have, now or at any time in the future.

**As the Flex Cam system which are specially made, we recommend that you keep reserve systems in stock to avoid the risk of delay when the need arises.**

### 发送器-接收器系统

### 一般提示

为了确保系统功能安全，必须将使用数据和安装尺寸图表提交 FIBRO 检查。

我方特此提示：将系统装入模具时应确定螺栓连接的件数，以及软管长度。

**安装、调试、保养和维修发送器-接收器系统均需要特种知识，因此，仅限经过 FIBRO 培训的专业人员执行前述工作。**

为此，您可根据安装套件要求 FIBRO 委派装配工，但需另行收费。

请与我们联系以便约定日期。

如需技术咨询，请随时联系我们。

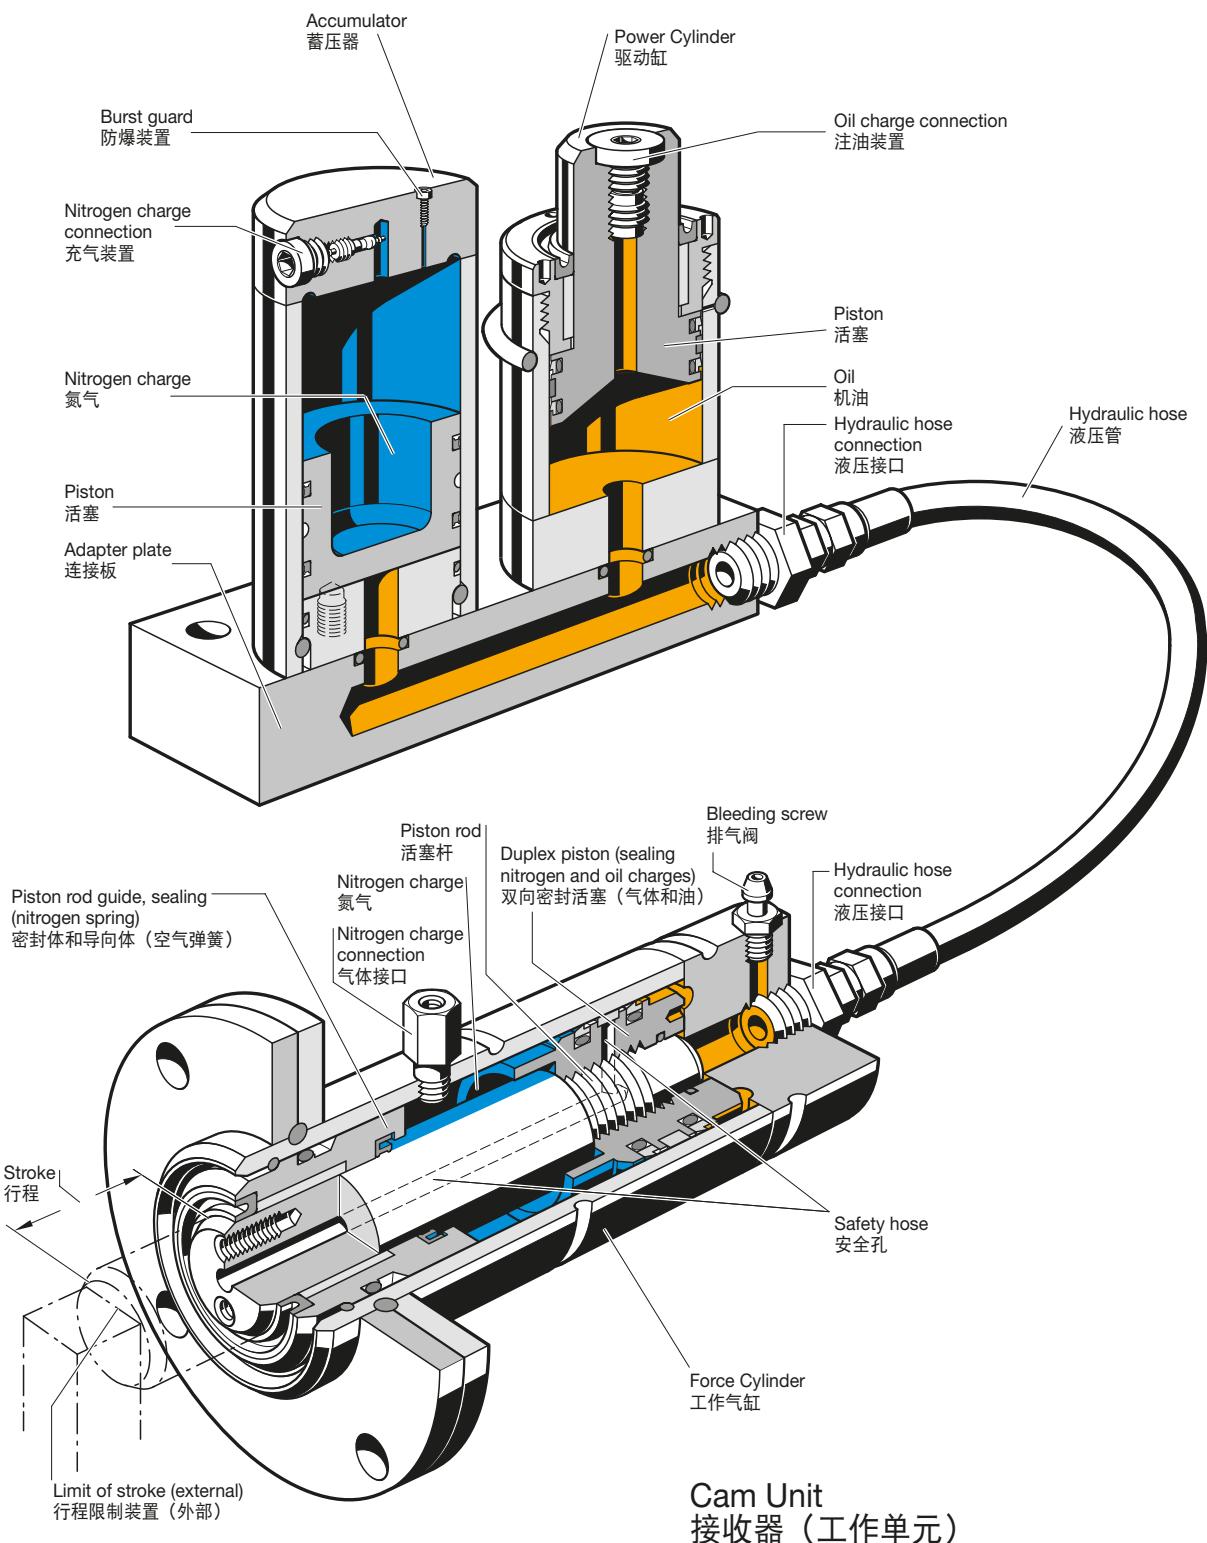

**由于发送器-接收器系统需要特殊制造，因此，我方建议您保留一套备用系统，以便在发生故障时为新货交付留出必要的时间。**

## Flex Cam

## 发送器-接收器系统

## Power Unit 发送器（传动装置）

## Flex Cam

### Introduction

The hydraulic cam system is the ideal component for executing linear motions at any point in the available space.

The system is increasingly being used in tool making, in particular, to drive drawing, moulding, cutting and drilling operations where conventional slides cannot be used due to lack of space or inconvenient position.

The working motion is generated by the cam unit (e.g. the working cylinder), which can be installed in any position in the available space.

The cam unit is controlled by a driving cylinder which, in turn, is activated by the stroke motion of a press, for example.

The link between the two is provided by a hydraulic hose in which the volume of oil in the power unit is displaced to the cam unit.

### Description

#### Power Unit

The Power Unit consists of the following components:

- Power Cylinder
- Accumulator
- Adapter plate

The Power Cylinder is filled with oil at one end, while the machine that executes the stroke is at the opposite end.

The accumulator is charged with nitrogen gas at one end. In the idle state, the base of the piston rests on the Accumulator, relieving the pressure on the system.

The adapter plate connects the Power Cylinder to the Accumulator and Force Cylinder.

In the standard version, the capacity of the accumulator is matched to the total displacement volume of the Power Cylinder. It is thus of the same height as the piston rod. The integral rupture protection device opens at 517 bar.

The Power Unit is also available with a separate Power Cylinder and Accumulator.

#### Cam Units

There are 3 types of Cam Units:

- Force Cylinder 2018.30./40./50./60.
- Compact Cam 2018.11.
- Flange Cam 2018.12.

#### Force Cylinder 2018.30./40./50./60.

##### Design

The accumulator is charged with nitrogen gas at one end (20 – 40 bar). The volume of oil displaced from the Power Unit acts on the other end when the Power Unit is pressurised. The Force Cylinder then extends. The retraction motion is generated by the nitrogen gas when the pressure is relieved on the stroke side of the Power Cylinder.

The displacement length of the Force Cylinder is twice as long as the permissible nominal displacement length. The unused displacement capacity is needed as a compartment for the pressurised nitrogen gas in order to return the stroke.

## 发送器-接收器系统

### 引言

发送器-接收器系统是一款能够在腔室内实现自由线性移动的理想组件。

尤其在模具制造时，可将该系统用于增强拉伸、成型、切削和打孔操作时的传动情况。如果由于空间或位置原因无法安装传统滑阀时，也可使用该系统。

作功运动由所谓的接收器（例如，工作气缸）完成，而接收器可安装在腔室内的任意位置。

发送器（驱动缸）则负责驱动上述接收器，其通过行程带动的移动（例如，压力机）被激活。

液压管作为连接装置使用，发送器的油量通过该管被挤压至接收器。

### 说明

#### 发送器（传动装置）

发送器由下列组件构成：

- 驱动缸
- 蓄压器
- 适配板

驱动缸通过连接室以无压方式向蓄压器和接收器注油。

蓄压器单侧加注氮气。静止状态时，其通过放置活塞底部以无压方式作用于系统。

适配板通过液压管将驱动缸和接收器连接在一起。

标准规格中，蓄压器贮存容量的设计依据驱动缸的整体挤压容量进行。由此产生含活塞杆的共同结构高度。517 bar 时，内置式防爆装置打开。

也供应带单独驱动缸和蓄压器的发送器规格。

#### 接收器（工作单元）

接收器分为 3 种类型：

- 工作气缸 2018.30./40./50./60.
- 紧凑型模具滑阀 2018.11.
- 卷边滑阀 2018.12.

#### 工作气缸 2018.30./40./50./60.

##### 结构

蓄压器单侧加注氮气（20–40 bar）。向驱动缸施压时，缸内受挤压的油量将作用于背面。接着，工作气缸驶出。一旦驱动缸行程侧的负载下降，则通过氮气完成复位。

工作气缸行程室长度为允许额定行程长度的一倍。未经使用的行程室可作为气体室供用于复位行程的预紧氮气使用。

## Flex Cam

### Applications

The Force Cylinder is designed to drive an individual tool component (e.g. a slide).

The nominal stroke of the Force Cylinder may be limited by external stops. As a standard the stroke's end position is limited by an internal stop according to stroke length. The Force Cylinder is not guided and therefore cannot absorb any side loads. The tool components themselves must be guided.

 **Side loads acting on the Force Cylinder lead to system failure.**

When attaching accessories, be careful to ensure that the axes are lined up correctly to avoid transverse forces during the stroke. Coupling pins or similar accessories must be used for the connection as there must be no rigid connection between the piston of the Force Cylinder and the tool components.

### Compact Cam 2018.11.

#### Design

The Power Cylinder starts the piston rod of the Compact Cam moving when pressurised.

The slide is returned by external gas springs. Two pillars with guideways prevent the tool holder plate rotating. The clearance in the guides is 0.01 - 0.03 mm.

#### Applications

The Compact Cam is suitable for hole punching operations involving no transverse forces. The Compact Cam is guided and has an internal stop. Punches can be mounted directly on the tool holder plate.

 **Side loads on the Compact Cam will lead to system failure.**

In cutting operations with a small cutting clearance and asymmetrical cutting forces a guide bolster should be provided, with an external guide to absorb the lateral forces. As with the Force Cylinder, coupling pins must be used for the connection between the slide and the external guide (uncoupling). The Compact Cam is attached by 4 fixing screws. A feather key groove absorbs the cutting forces. It is positioned by means of two pilot holes.

### Flange Cam 2018.12.

#### Design

The Flange Cam construction is the same as the construction of the Compact Cam. The Power Cylinder starts the piston rod of the Flange Cam moving when pressurised. The slide is returned by external gas springs. Two pillars with guideways prevent the tool holder plate rotating. The clearance in the guides is 0.01 - 0.03 mm. The tool holder plate is supported by a roller and a support plate to absorb lateral forces.

#### Applications

The Flange Cam is suitable for work operations with lateral forces (e.g. bend up, sliding). The Compact Cam is guided with an integrated stop. Punches can be mounted directly on the tool holder plate.

## 发送器-接收器系统

### 特性

工作气缸设计用于驱动单独的模具组件（例如，滑阀）。

可通过外部挡块限制工作气缸的额定行程。通常，通过内部挡板即可根据额定行程长度限制行程位置。工作气缸未经导向，因此不会吸收侧向力。必须单独导向模具组件。

 **作用于工作气缸侧面的力会导致系统停止运转。**

固定附加装置时，必须注意仔细对齐各个轴，以便避免行程过程中所产生的横向力。必须通过接头棒或类似装置完成连接（切勿使用刚性连接连接工作气缸活塞和模具组件）。

### 紧凑型模具滑阀 2018.11.

#### 结构

加压时，驱动缸推动紧凑型模具滑阀的活塞杆。

通过安装于外部的空气弹簧完成复位。通过两根导向式立柱实现模具接收板的扭转止动。导向间隙为 0.01 - 0.03 mm。

### 特性

紧凑型模具滑阀适用于侧面无负载的打孔操作。紧凑型模具滑阀具备导向功能并配有一个内部终端挡块。可将打孔冲头直接安装于模具接收板。

 **作用于紧凑型模具滑阀侧面的力会导致系统停止运转。**

使用偏心切削力以较小切削间隙执行切削操作时，必须配备可吸收侧向力的额外外部导向装置。此时，与工作气缸一样，还必须通过接头棒将滑阀与额外导向装置相连（断开）。通过四个固定螺栓固定紧凑型模具滑阀。安装一个滑键槽以支撑所产生的切削力。借助两个导套孔实现定位。

### 卷边滑阀 2018.12.

#### 结构

卷边滑阀的结构与紧凑型模具滑阀相同一致。加压时，驱动缸推动卷边滑阀的活塞杆。通过安装于外部的空气弹簧完成复位。通过两根导向式立柱实现模具接收板的扭转止动。导向间隙为 0.01 - 0.03 mm。为了吸收侧向力，可借助一个滚轮和支撑板实现对模具接收板的支撑。

### 特性

卷边滑阀设计用于含侧向力的工作操作（例如，提升、卷边）。卷边滑阀具备导向功能并配有一个内部终端挡块。可将冲头直接安装于模具接收板。

## Flex Cam

**⚠ A guide bolster with external guide should be provided for bending operations with asymmetrical forces.**

The Flange Cam is attached by 4 fixing screws. A feather key groove absorbs the bending forces. It is positioned by means of two pilot holes.

### Alternative drive

For operating the Cam Unit electrically powered Hydraulic pump units can be used (see page 56). The max. working pressure must not exceed 150 bar. The max. speeds listed on page 8 must not be exceeded.

### Charging fittings

Nitrogen gas: The Accumulator and Cam Unit can be charged with the gas spring filling charge 2480.00.32.21.

Hydraulic system: The system is filled and vented using the oil filling unit 2018.00.30.

Filling and venting of the system is described in detail in the user manual supplied with the system.

### Hydraulic connection

See also pages 57-64

User-friendly, flexible high-pressure hoses are ideal for the hydraulic connections (see page 56).

A space-saving alternative is to use system hydraulic pipes.

The same screwed couplings are used for both hoses and pipes.

The hose length should not exceed 2000 mm. This is important to ensure a constant build-up of pressure and – even more importantly – to minimise impact during cutting without a significant pressure build-up.

The couplings should be designed for at least 300 bar nominal pressure and 1000 bar rupture pressure.

This is essential if the connection is to be sufficiently rigid and for the rupture protection device to operate at 517 bar.

### Quick-release couplings for hydraulic hoses

We recommend that you use quick-release couplings to join the hydraulic hoses.

#### Benefits:

- The system can be filled and vented under optimum conditions when off the tool, either at FIBRO or on site.
- If the tool has to be assembled or dismantled, the hydraulic hose connecting the Power Unit and the Cam Unit is disconnected using the quick-release coupling. It is thus not necessary to dismantle the hoses, drain and refill the oil and vent the system, which keeps costs down.

For layout purposes, the dimensions of the commonly used threaded couplings and hoses are shown on pages 57, 60-64.

## 发送器-接收器系统

**⚠ 使用偏心作用力执行卷边操作时，必须配备可收侧向力的额外外部导向装置。**

通过四个固定螺栓固定卷边滑阀。安装一个滑键槽以支撑所产生的弯曲力。借助两个导套孔实现定位。

### 传动装置选件

也可使用液压机组（参见第 56 页）驱动接收器。驱动压力不得超过 150 bar 的允许值。必须注意最大允许速度（参见第 8 页）。

### 加注配件

氮气：可使用空气弹簧加注配件 2480.00.32.21 加注蓄压器和接收器。

液压：使用注油装置 2018.00.30 加注和排空系统。随附的用户手册中详细说明了加注和排空系统的方法。

### 液压连接

另请参见第 57-64 页

液压连接主要采用用户友好的弹性高压软管制成（参见第 56 页）。

作为一款可节省空间的选件，其也可用于连接系统液压管。

供软管或管道使用的螺栓连接均一样。

软管长度不得超过 2000 mm，以便将软管的呼吸作用保持在容许界限内。这一点不仅是持续形成压力的重点，而且在无显著压力形成的切削操作时保持切削冲击较低方面显得更为重要。

连接依据最低 300 bar 的额定压力和 1000 bar 的破裂压力设计。

这是 517 bar 时确保连接刚性和防爆装置功能的前提条件。

### 液压软管快速接头

建议为液压软管配备一个快速锁闭接头。

#### 优点：

- 系统已由 FIBRO 或在现场模具外部以最佳前提条件完成加注和排空。
- 需要安装或拆卸模具时，可通过快速锁闭接头断开发送器到接收器之间的液压软管连接。无需执行软管拆除、油料排空、重新加注和排空系统的工作，从而降低了成本。

第 57, 60-64 页以图示形式介绍了与结构布局相关的常用螺栓连接和软管的尺寸。

FIBRO 可根据说明批量生产软管连接。

## Flex Cam

### Leaks and oil level display

The experience we have gained in manufacturing gas springs enables us to select the most suitable seals.

The result is an effective and long-lasting seal.

The connecting line can be assembled with no leaks, using available materials and with careful installation.

If an oil leak does occur, it will be compensated short term by the overtravel volume in the Accumulator.

The Accumulator and Power Cylinder are of the same height, so any loss of oil from the system will be manifested by a difference in height.

### Stroke rate

The stroke rate is dependent on the minimum flow opening, the volume of oil and the working and return pressures. The connecting openings allow a working stroke rate of up to 0.8 m/s. Although this is limited by the extent to which the system heats up due to the high stroke rates. The system temperature should not exceed 60 °C.

As the volume of the hydraulic oil increases when the system temperature rises, the cam unit no longer returns completely to its stroke starting position due to the oil expansion. For this reason, a stroke reserve must be complied with at the start of the stroke (idle stroke).

 **The minimum idle stroke should be between 3 mm and 6 mm, depending on the number of strokes.**

### Safety instructions

If the layout of the system gives the Force Cylinder an excessive displacement volume due to excess overtravel and/or seizing of the cylinder, the pressure in the system can exceed the admissible value of 280 bar. In critical situations, this effect will be counteracted by the opening of a rupture valve at 517 bar.

The couplings are designed for a nominal pressure of 300 bar and 1000 bar rupture pressure.

On the gas side, the Accumulator is pressurised at 150 bar and is subject to Pressure Equipment Directive 97/23/EC.

To monitor safety during the process, we recommend installing a control fitting as an additional check on the gas side – see range of accessories.

## 发送器-接收器系统

### 泄露和油位指示器

从空气弹簧制造方面积累的经验改善了对于密封件的选择。

其结果是实现了长久的密封性。

连接管道采用可用材料制造并通过仔细安装确保其不会泄露。

如果出现漏油，其可通过蓄压器中的超行程容量暂时得到补偿。

蓄压器与驱动缸的结构高度相同。因此，可以通过高度差别判断系统内是否出现漏油。

### 行程次数和油膨胀

行程次数取决于最小流量开孔、油量和工作及复位压力。接口开孔允许的最大工作行程速度为 0.8 m/s。但该速度也可能受到因高行程次数导致的系统自身加热的限制。系统温度不得超过 60 °C。

因为系统温度升高时液压油体积将增大，接收器因受到油膨胀的影响而无法完全驶回其初始位置。出于上述原因，必须在行程起始位置（空行程）保留备用行程。

 **根据行程次数，最小空行程在 3 mm 至 6 mm 之间。**

### 安全提示

如果工作气缸的挤压容量因超行程过大和/或工作气缸堵塞而远远超出设计限制，则系统内的压力可能超越 280 bar 的允许值。情况严重时，将在 517 bar 时打开防爆阀予以应对。

连接管依据 300 bar 的额定压力和 1000 bar 的破裂压力设计。

蓄压器气体侧可承受 150 bar 压力并符合压力设备指令 DGRL 97/23/EG 的规定

为了监控进程安全，我方建议通过链接一个控制配件对气体侧进行检查 – 参见附件方案。

## Flex Cam

## Capacity and output

The forces listed in table 1 below are applicable for the following nitrogen gas pressures:

Accumulator	150 bar
Force Cylinder	20 bar
Compact Cam	
2018.11.01500. [ ] and 2018.11.04000. [ ]	180 bar
Gas spring 2480.21. and .23.00000. [ ]	
2018.11.06000. [ ]	180 bar
Gas spring 2487.12.00350. [ ]	
Compact Cam	
2018.11.09000. [ ]	150 bar
Gas spring 2480.12.00500. [ ]	
2018.11.15000. [ ]	150 bar
Gas spring 2487.12.00750. [ ]	
Flange Cam	
2018.12.04000.049	
Gas spring 2480.21. bzw. .23.00000. [ ]	180 bar

## Comments

The Accumulator and the Force Cylinder are pressure vessels and as such are subject to the Pressure Equipment Directive 97/23/EC.

During cutting and hole punching operations the nominal force of the Compact Cam should only be utilised up to 75% to minimise impact during cutting which is reinforced by the Accumulator. Impact during cutting can be reduced by polished tool edges (e.g. roof shape) and so downtime can be reduced.

Description 说明	Force Cylinders 工作气缸 2018.30.	Compact Cams 模具滑阀 紧凑型 2018.11					Flange Cams 卷边 滑阀 2018.12	Power Unit 接收器 2018.20					15	40	60	90	150

\*\* including +10 mm overtravel

(1) not for 2018.20.01500. and 2018.20.15000.

Table 1: Technical data

Values other than those specified in the above table may be accepted under certain circumstances or if different stroke lengths, speeds and frequencies are combined.

## 发送器-接收器系统

## 容量和性能

下文表 1 中的各项力所承受的氮气压力如下：

蓄压器	150 bar
工作气缸	20 bar
紧凑型模具滑阀	
2018.11.01500. [ ] 和 2018.11.04000. [ ]	180 bar
空气弹簧 2480.21. 或 .23.00000. [ ]	
2018.11.06000. [ ]	180 bar
空气弹簧 2487.12.00350. [ ]	
紧凑型模具滑阀	
2018.11.09000. [ ]	150 bar
空气弹簧 2480.12.00500. [ ]	
2018.11.15000. [ ]	150 bar
空气弹簧 2487.12.00750. [ ]	
卷边滑阀	
2018.12.04000.049	
空气弹簧 2480.21. 或 .23.00000. [ ]	180 bar

## 备注

蓄压器和工作气缸均为压力容器并符合压力设备指令 DGRL 97/23/EG 的规定。

执行切削或打孔操作时，仅限使用紧凑型模具滑阀 75 % 的额定力，以便将通过蓄压器增强的切削冲击保持在较低水平。切削冲击可通过抛光模具的边缘（例如，篷形）予以缓解并由此提高利用率。

\* 不适用于 2018.11.01500.

\*\* 包括 +10 mm 超行程

(1) 不适用于 2018.20.01500. 和 2018.20.15000.

表 1: 技术参数

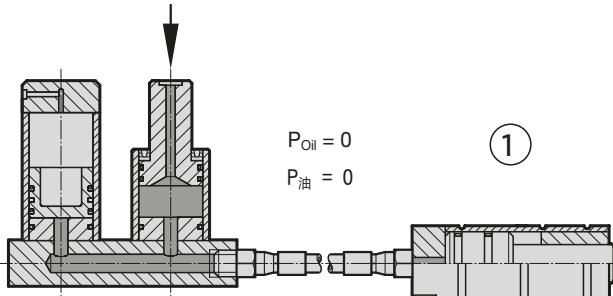

可在特定情况下或在组合行程长度、速度和频率时接受与表 1 中规定值存在偏差的数值。

## Flex Cam

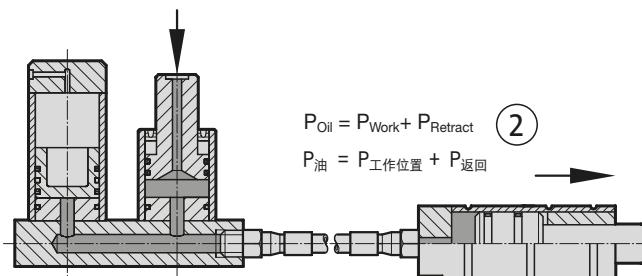

### Function

The individual components of the Flex Cam System described above interact as follows:

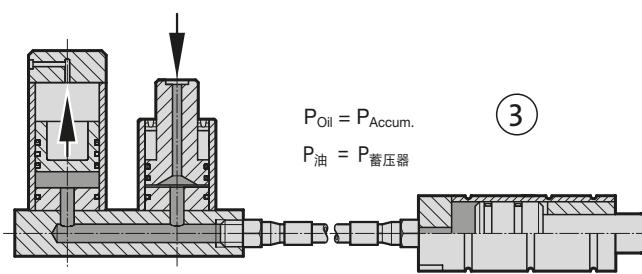

- ① The Power Cylinder is actuated by the stroke of the press.

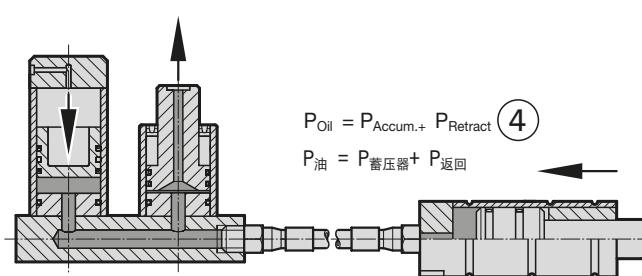

- ② Once the pressure build-up in the Flex Cam exceeds the preset pressure in the Force Cylinder, the Force Cylinder extends.

- ③ When the Force Cylinder reaches its working position, the pressure in the system rises to match the pressure in the Accumulator. The rest of the displaced volume of oil is then held in the Accumulator (Power Cylinder overtravels by approx. 3 - 10 mm).

- ④ This overtravel is essential since it ensures that a constant contact pressure is built up during each stroke.

At the same time the pressure on the Power Cylinder is relieved (return travel of the press), the Force Cylinder is reset by the nitrogen gas.

## 发送器-接收器系统

### 功能

发送器-接收器系统的各个前述组件协作方式如下：

- ① 通过行程移动（压力机）操作驱动缸。

## Flex Cam

### Pressure ratios in the system

The above diagram shows the oil pressure build-up during the work cycle. Before the working motion, the oil-system is pressureless.

When the Power Cylinder is actuated, the oil pressure rises to the preset gas pressure in the Cam Unit. As the Force Cylinder continues to travel, the volume of gas is further compressed until the work operation is executed.

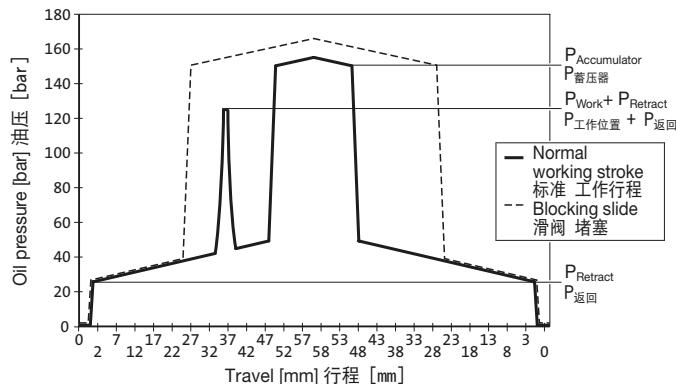

At the same time, the back-pressure in the system rises due to the punching operation, for example. Once the operation has ended, the Power Cylinder continues as far as the end position of the Force Cylinder. This ensures that the excess volume of oil is fully absorbed by the Accumulator. At the same time, the oil pressure rises to match the charging pressure in the Accumulator.

If a malfunction occurs in the tool part during system travel and blocks the travel of the Cam Unit, all the displaced oil is held in the Accumulator. The oil pressure increases until it equals that of the compressed nitrogen in the Accumulator.

The system is protected by an integral rupture protection device in the Accumulator which opens at 517 bar to vent the nitrogen. The resulting system security protects the tool from damage by the Flex Cam.

## 发送器-接收器系统

### 系统中的压力情况

上图展示工作循环中形成的油压。作功运动前，系统处于无压状态。如果驱动驱动缸，则油压上设置接收器中预紧的气体压力。工作气缸的行程向前移动时，在工作操作前气体体积将被继续压缩。此时，系统将承受因诸如冲压操作而上升的反作用力。如果工作操作结束后驱动缸继续执行行程移动直至抵达接收器终端位置，则剩余油量将完全被蓄压器吸收且油压上升至蓄压器中的加注压力。

如果模具部件中的系统在执行作功运动的过程中出现堵塞接收器行程移动的故障，则受挤压的油量将完全被蓄压器吸收。油压将一直上升直至达到蓄压器内被压缩的氮气的压力。

为了确保系统安全，应在蓄压器内集成一个可在 517 bar 时打开的防爆装置，以便将氮气排放至外界。从而实现系统安全并防止模具因发送器-接收器系统而受到损坏。

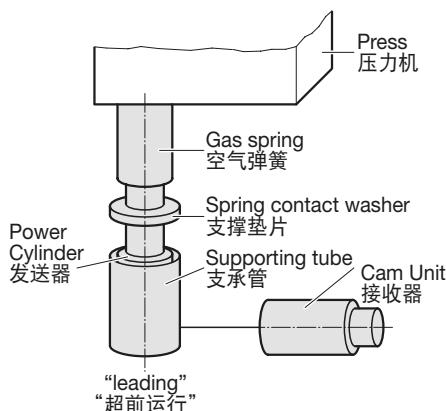

## Flex Cam

### Possible combinations

#### Power Unit with Cam Unit

##### Cam Unit leading

If a stroke of the Cam Unit is required before the tool actually reaches its working position, this can be achieved by incorporating a gas spring. The press stroke actuates a gas spring which, in turn, actuates the Power Unit, since its preressing force is higher than the nominal force of the Power Unit. When the Cam Unit reaches its end position, the drive (press) overtravel is compensated by the retracting piston rod of the gas spring. A spring contact washer transmits the pressure of the gas spring to the supporting tube when the Power Unit reaches its end position.

### Several Cam Units driven asynchronously

Several Cam Units can be driven by a common Power Unit. The individual Cam Units should not, however, be mechanically connected to one another since the feedrates cannot be totally synchronised due to the different connection lengths (system losses) and restoring forces.

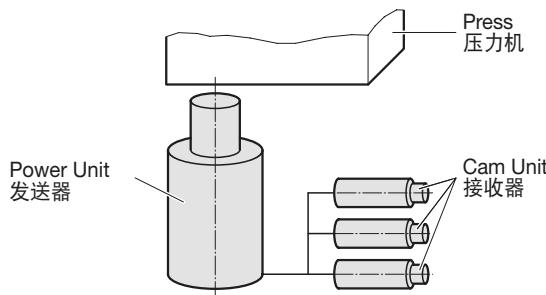

## 发送器-接收器系统

### 发送器和接收器的 组合方式 接收器超前运行

如果在地道实际模具工作位置前就需要接收器开始行程移动，则可通过与空气弹簧合作实现这一要求。下压行程驱动空气弹簧，由于弹簧的预紧力高于发送器的额定力，因此其将再次驱动发送器。达到接收器的终端位置后，通过驶入空气弹簧的活塞杆补偿传动装置（压力机）的超行程。空气弹簧的压力将在发送器终端位置通过支撑垫片传输至支承管。

### 异步驱动多个接收器

可通过同一个发送器驱动多个接收器。但是，由于不同的连接长度（流动损失）和复位力无法保证绝对同步的进给速度，因此，各个接收器之间不得采用机械式连接。

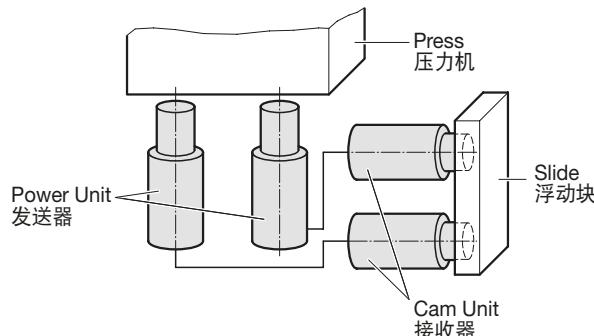

### Several Cam Units driven synchronously

Synchronous operation can be achieved by using two systems of the same dimensions, although this application requires the restoring force of the individual Cam Units to be equal, as well.

### 同步驱动多个接收器

通过使用两个尺寸相同的系统的可实现同步驱动。但该使用情况的前提是接收器的复位力一样大。

## Flex Cam

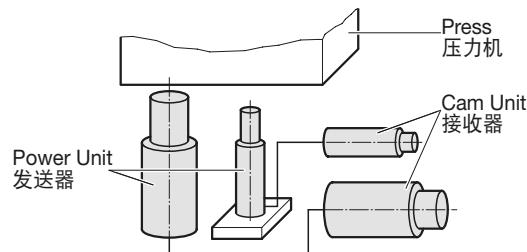

### One or more Cam Units driven with delay

A time delay, and thus a variable working sequence for the Cam Units, can be achieved by combining two different strokes. The first Power Unit to be actuated executes the first step. As the Cam Unit moves beyond its end position, the excess oil is displaced into the Accumulator (not shown in the diagram). The second Power Unit can then enter the working sequence as required.

### 发送器-接收器系统

### 交错驱动一个或多个接收器

通过组合两个不同的行程可实现交错驱动，从而改变接收器工序的时间。首先被驱动的发送器执行第一项工作步骤。接收器超过终端位置时，剩余的油将被挤压至蓄压器（图中未注明）。由此，第二个发送器可在任意时间进入加入工序。

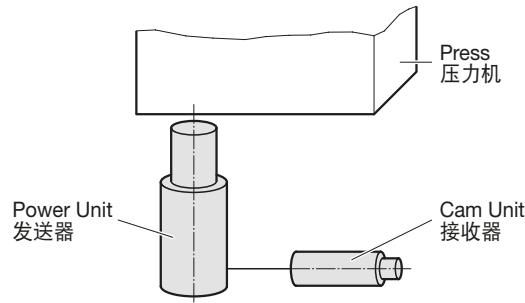

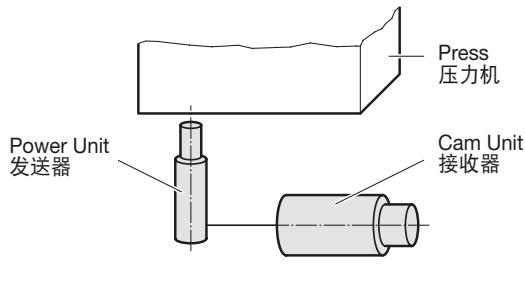

### Variable speed / force drive

The forces or travel speeds can be combined as required by varying the ratio between Power Unit sizes and Cam Unit sizes. The maximum travelling speed should not exceed 0.8 m/s, however.

### 非恒定速度/力驱动

通过改变发送器尺寸而改变接收器尺寸可根据需要组合各种力或各种行程速度。最大行程速度不得超过 0.8 m/s。

# Flex Cam

## Transmission ratios in use

Transmission or reduction ratios can be expressed in four different ways:

- a) Force
- b) Speeds of the individual Cam Units
- c) Press travel speed to Cam Unit travel speed
- d) Stroke lengths

## Transmission ratios

The nominal transmission ratio of 1:1 is normally used throughout the system.

The ratio can vary, however, according to the combination (and number) of Power Units and Cam Units used (see table on page 16).

## Selecting the components

The component sizes are explained step by step below with regard to the forces required, stroke length and the number of operations.

### Step 1: Size of the Cam Unit

Calculate the force required for the operation to be carried out. The Cam Unit used should provide sufficient force to execute the operation. If the force required cannot be precisely calculated, we recommend that you use a larger Cam Unit.

Force required (kN) / 所需力 (kN)	Cam Unit / 接收器
0 - 15	2018.□□.01500.□□□
15 - 40	2018.□□.04000.□□□
40 - 60	2018.□□.06000.□□□
60 - 90	2018.□□.09000.□□□
90 - 150	2018.□□.15000.□□□

Force required: \_\_\_\_ kN

Cam Unit size: \_\_\_\_

所需力: \_\_\_\_ kN

接收器尺寸: \_\_\_\_

Example: If the force required is 22 kN, then a 40 kN Cam Unit should be used. Cam Unit 2018.□□.04000.□□□

### Step 2: Cam Unit stroke length

Determine the Cam Unit stroke required to execute the operation in the tool. Use the Cam Unit with the shortest possible stroke, but remember that the tool must have sufficient space for the workpiece.

示例: 如果所需力为 22 kN, 则选用 40 kN 的接收器。

接收器 2018.□□.04000.□□□

### 步骤 2: 接收器的行程长度

根据模具中执行工序所需的接收器行程计算得出。尽可能选用行程最短的接收器, 但在选择时应注意: 必须在模具中为工件预留足够的空间。

Required stroke length (mm) 所需 行程长度(mm)	Max. stroke length of Cam Unit (mm) 接收器 最大行程长度 (mm)	Part number 商品编号
0 - 25	25 (24)***	2018.□□.□□□□□.025*
25 - 50	50 (49)***	2018.□□.□□□□□.050*
50 - 100	100 (99)***/***	2018.□□.□□□□□.100*

\*) 2018.11.□□□□□.024/049/099

\*\*) This stroke length does not apply to Compact Cam  
2018.11.01500.□□□

\*\*\*) Compact cam

Stroke length of Cam Unit: \_\_\_\_ mm  
Example: If the stroke length required is 35 mm, use a Cam Unit with a stroke length of 50 mm.

\*) 2018.11.□□□□□.024/049/099

\*\*) 该行程长度不适用于紧凑型模具滑阀  
2018.11.01500.□□□

\*\*\*) 紧凑型模具滑阀

接收器单元行程长度: \_\_\_\_ mm

示例: 如果所需行程长度为 35 mm, 则应选用行程长度为 50 mm 的接收器。

### Step 3: Order number of the Cam Unit

Select the Cam Unit according to the type of operation to be performed.

See also pages 6, 7, 16-18

Compact Cam: 2018.11.□□□□□.□□□

Flange Cam: 2018.12.04000.049

Force Cylinder: 2018.30.□□□□□.□□□

Example: The order number for the Compact Cam is 2018.11.04000.049

### 步骤 3: 接收器单元订货编号

根据工作操作的类型选择接收器。

另请参见第 6、7、16-18 页

紧凑型模具滑阀: 2018.11.□□□□□.□□□

卷边滑阀: 2018.12.04000.049

工作气缸: 2018.30.□□□□□.□□□

示例: 紧凑型模具滑阀的订货编号为 2018.11.04000.049

# 发送器-接收器系统

## 传动

可通过四种方式进行传动或减速:

- a) 力
- b) 接收器之间的速度
- c) 下压行程速度转变为 接收器行程速度
- d) 行程长度

## 传动比

通常, 常用标称尺寸中的传动为 1:1。

组合不同型号/数量的发送器和接收器会导致传动比随之变化 (参见第 16 页的表格)。

## 选择组件

下文将围绕所需力、行程长度和工序数量逐步阐明组件的尺寸。

### 步骤 1: 接收器单元的尺寸

根据模具中工序所需的力计算得出。选择接收器时, 应确保有充足的力量执行工序。如果无法准确算出所需的力, 则建议使用尺寸较大的接收器。

## Flex Cam

## 发送器-接收器系统

Power unit selection table 发送器选择表

# Flex Cam

## 发送器-接收器系统

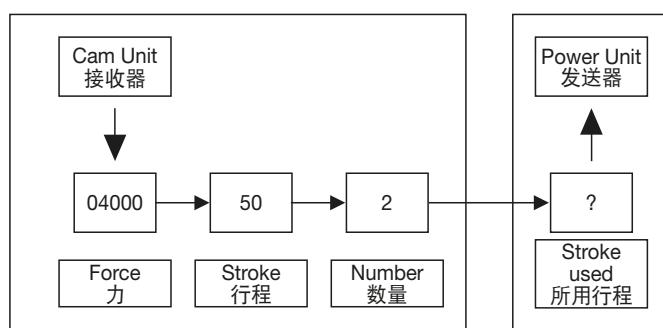

### Step 4a Size and stroke of the Power Unit

Follow **step 4a** if one to three **Cam Units of the same size** are connected to a given Power Unit. If **different Cam Units** are connected to a Power Unit, then **step 4b** should be used.

Select the Power Unit from the following table. The table should be read in the following order: Cam Unit – force – stroke – number – Power Unit – stroke length. We recommend that no more than three Cam Units be connected to a single Power Unit.  
Make sure that you do not exceed the maximum Cam Unit stroke speed (0.8 m/s).

### See also the following examples:

**Example 1 (Fig. 1):** A Power Unit 2018.20.04000.060 is provided as standard for a Compact Cam 2018.11.04000.049. The nominal stroke of the Power Unit is 60 mm. The transmission ratio is 1:1. The stroke of the Compact Cam is thus performed at the same speed as the press.

Selection flowchart 选择流程图

Power Unit = Nominal working force / nominal stroke + 10 mm overtravel  
发送器 = 标称工作力 / 标称行程 + 10 mm 超行程  
SU = Working stroke (stroke actually used) + < 10 mm 超行程 (用于形成压力)  
TR = Transmission ratio  
= 传动比 (发送器: 接收器)

### 步骤 4a 发送器的尺寸和行程

**步骤 4a** 可在一至三个相同大小的接收器与一个发送器相连时使用。如果不同尺寸的接收器与一个发送器相连，则应使用**步骤 4b**。

根据下文表格选择发送器。表格的阅读顺序如下：接收器 力 行程 数量 发送器 行程长度：建议连接至同一发送器的接收器不超过三个。不得超过接收器行程的最大速度 (0.8 m/s)。

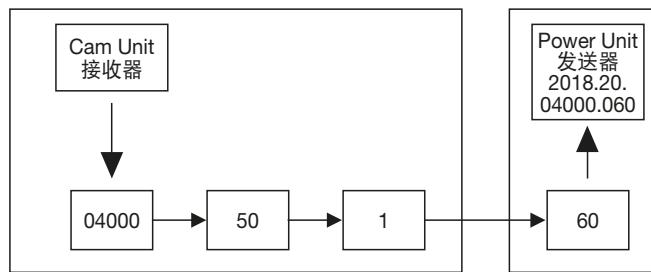

Fig. 1: Selection for example 1 图 1：选择示例 1

**Example 2 (Fig. 2):** If a press stroke of just 30 mm can be used to execute the operation, then a larger Power Unit 2018.20.09000.035 should be used for the Cam Unit 2018.11.04000.049. The Power Unit stroke used is 30 mm, the transmission ratio is 2.5. If the press speed is 0.3 m/s, then the Cam Unit stroke speed obtained is  $2.5 \times 0.3 \text{ m/s} = 0.75 \text{ m/s}$ .

The stroke used by Power Unit and Cam Unit can be perfectly matched to any special constraints associated with the tool.

For some applications, the speed of the Cam Unit must be increased in proportion to the press speed.

**⚠ If several Cam Units are connected to a Power Unit, then the individual Cam Units will not have the same stroke speed.**

### 另请参见下列示例：

**示例 1 (图 1) :** 使用紧凑型模具滑阀 2018.11.04000.049 时，通常配备一个发送器 2018.20.04000.060。发送器的标称行程为 60 mm。传动比为 1.0。紧凑型模具滑阀的行程按照与压力机相同的速度移动。

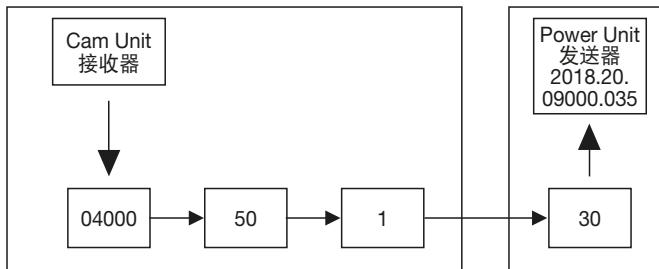

Fig. 2: Selection for example 2 图 2：选择示例 2

**示例 2 (图 2) :** 如果执行工作操作时仅需要 30 mm 的下压行程，则可为接收器 2018.11.04000.049 选择尺寸更大的发送器单元 2018.20.09000.035。发送器所用行程为 30 mm，传动比 2.5。如果下压速度为 0.3 m/s，则可得出接收器行程速度为  $2.5 \times 0.3 \text{ m/s} = 0.75 \text{ m/s}$ 。

发送器和接收器所用的行程可根据模具内的特殊需求优化调整。

某些应用时，需要将接收器调至比压机更高的速度。

**Example 3 (Fig. 3):** A Power Unit 2018.20.04000.110 can be used with two Compact Cams 2018.11.04000.049 and a useful press stroke of 110 mm. The Power Unit stroke used is 110 mm and the transmission ratio is 0.5.

If the press speed is 0.3 m/s, then the mean Cam Unit stroke speed obtained is  $0.5 \times 0.3 = 0.15 \text{ m/s}$ .

**⚠ 如果将多个接收器与一个发送器相连，则接收器的行程速度互不相同。**

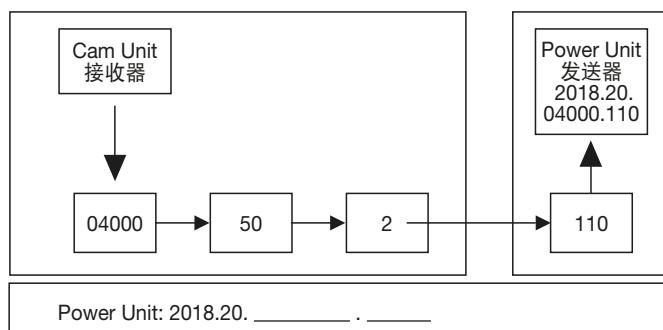

Fig. 3: Selection for example 3 图 3：选择示例 3

**示例 3 (图 3) :** 使用两个紧凑型模具滑阀 2018.11.04000.049 和一个 110 mm 可用下压行程时，则可使用 2018.20.04000.110。发送器所用行程为 110 mm，传动比 0.5。

如果下压速度为 0.3 m/s，则可得出平均接收器行程速度为  $0.5 \times 0.3 = 0.15 \text{ m/s}$ 。

## Flex Cam

### Step 4b

#### Size and stroke of the Power Unit for different Cam Unit sizes

The total volume of oil in the Cam Units should be calculated using the following formula. The total volume of oil is the sum of all the volumes for all Cam Units. The volume is the product of the piston surfaces and strokes used. The total volume of oil  $V_N$  for the Power Units corresponds to the minimum volume of oil for the Cam Units (in  $\text{dm}^3$ ).  $A_N$  is the piston surface area in the Cam Unit ( $\text{dm}^2$ ) as shown in table 2.

$$V_N = [(A_1 \cdot s_1) + (A_2 \cdot s_2) \dots (A_N \cdot s_N)] : 100$$

$A_N$  = Piston surface area of Cam Units

$s_N$  = Stroke length of Cam Units

## 发送器-接收器系统

### 步骤 4b

#### 不同接收器尺寸时的发送器尺寸和行程

根据下文公式计算接收器的整体油量。整体油量为所有接收器单元容量之和。容量为活塞面积和所用行程的乘积。接收器的整体油量  $V_N$  等于发送器的最小油量（单位： $\text{dm}^3$ ）。根据表 2 的内容， $A_N$  为接收器单元中的活塞面积（单位： $\text{dm}^2$ ）。

(Formula 1) (公式 1)

	接收器活塞面积	接收器行程长度
WK AZ AK	15 kN	40 kN
$A_N (\text{dm}^2)$	0,13	0,31
	60 kN	0,50
	90 kN	0,79
	150 kN	1,23

Tab. 2: Piston surface area of Cam Units 表2: 接收器活塞面积

Total volume of oil of Cam Units:  $V_N = \underline{\hspace{2cm}}$   $\text{dm}^3$

接收器整体容量:  $V_N = \underline{\hspace{2cm}}$   $\text{dm}^3$

WK = Compact Cam	紧凑型模具滑阀	2018.11. <input type="text"/> . <input type="text"/>
AZ = Force Cylinder	工作气缸	2018.30. <input type="text"/> . <input type="text"/>
AK = Flange Cams	卷边滑阀	2018.12. <input type="text"/> . <input type="text"/>

Select the appropriate Power Unit from Table 3.

The Power Unit must supply the minimum volume of oil as calculated above. Calculate the required Power Unit stroke  $s_{Gef}$  using the following formula:

从下文的表3 中选择相应的发送器。

发送器必须具备上文计算出的最小容量。根据下列公式计算发送器所需的行程  $s_{Gef}$ :

$s_{Gef} = [(V_N : V_G) \cdot s_G] + 10$	$V_N = \text{Total volume of oil of Cam Units}$	$V_G = \text{Total volume of oil of Power Unit}$	$s_G = \text{Power Unit stroke}$	$s_{Gef} = \text{Power Unit stroke required}$	(Formula 2) (公式 2)
	接收器整体容量	发送器整体容量	发送器行程	所需发送器行程	

Stroke length / 额定行程 长度 Nominal stroke length  $s_G$  / 行程长度  $s_G$  Power Unit size / 发送器尺寸 2018.20

		15 kN	40 kN	60 kN	90 kN	150 kN
.035	25	0,031	0,078	0,126	0,196	0,307
.060	50	0,063	0,156	0,251	0,393	0,614
.110	100	0,126	0,312	0,502	0,785	1,227
.160	150	0,188	0,468	0,753	1,178	1,841

Tab. 3: Volume of oil of Power Unit  $V_G$  ( $\text{dm}^3$ ) 表3: 发送器容量  $V_G$  ( $\text{dm}^3$ )

Power Unit stroke used:  $s_{Gef} = \underline{\hspace{2cm}}$  mm

所用发送器行程:  $s_{Gef} = \underline{\hspace{2cm}}$  mm

#### Example:

Select a Power Unit to operate a Compact Cam 2018.11.01500.049 and a Force Cylinder 2018.30.04000.050 with a used working stroke of just 40 mm.

例如:

运行紧凑型模具滑阀 2018.11.01500.049 和所用工作行程仅为 40 mm 的工作气缸 2018.30.04000.050 时, 必须选择一个发送器。

$$V_N = [(A_{WK} \cdot S_{WK}) + (A_{AZ} \cdot S_{AZ})] : 100$$

$$V_N = [(0,13 \cdot 49) + (0,31 \cdot 40)] : 100 \quad (\text{see formula 1}) \quad (\text{参见公式 1})$$

$$V_N = 0,189$$

The volume of oil of the selected Power Unit should be greater than 0,189  $\text{dm}^3$ . For example, the 2018.20.06000.060 supplies 0,251  $\text{dm}^3$ . (The 2018.20.04000.110 could also be used) (see table 3)

Calculate the used stroke of the Power Unit:

必须选择油量大于 0.189  $\text{dm}^3$  的发送器例如, 油量为 0.251  $\text{dm}^3$  的 2018.20.06000.060 (另外也可选用 2018.20.04000.110) (参见表 3):

计算发送器的所用行程:

$$s_{Gef} = ((V_N : V_G) \cdot s_G) + 10$$

$$s_{Gef} = ((0,189 : 0,251) \cdot 50) + 10 \quad (\text{see formula 2}) \quad (\text{参见公式 2})$$

$$s_{Gef} = 48 \text{ mm}$$

In the above example, we recommend a Power Unit 2018.20.06000.060 with a used stroke of 48 mm. The admissible Cam Unit stroke speeds defined in section 9 must not be exceeded. It should also be noted that the Cam Units will have different stroke speeds if two Cam Units are driven by a single Power Unit.

上述示例中, 建议发送器 2018.20.06000.060 搭配 48 mm 的所用行程。不得超过第 9 章中确定的允许的接收器行程速度。同时, 必须注意, 如果使用一个发送器驱动两个接收器, 则接收器的行程速度可能各不相同。

# Flex Cam

## 发送器-接收器系统

### Step 5

Select appropriate hoses and screwed couplings. The maximum admissible hose length between Power Unit and the Cam Unit is 2000 mm. The nominal hose diameter is determined on the basis of the size of the Power Unit. The hose size is matched to the flow of oil (see page 50).

Depending on the press speed a nominal hose width smaller than the standard nominal width may be used (see table 4).

Power Unit / 发送器单元	Nominal hose size, Standard nominal width, max. speed			Press speed / 下压速度
	软管尺寸	标准额定宽度	最大速度	
2018.20.01500		0,8 m/s	DN 12	0,6 m/s DN 12 0,4 m/s DN 12 0,2 m/s DN 12
2018.20.04000		DN 12	DN 20	DN 12 DN 12 DN 12
2018.20.06000		DN 20	DN 25	DN 20 DN 12

2018.20.15000		DN 32		DN 25 DN 20

Table 4: Press speed/nominal hose size 表4: 下压速度/软管尺寸

**It is easiest to determine the correct hose length if both Power Unit and Cam Unit are installed inside the tool.**

Remember to protect the hose against sharp edges etc. The hose moves slightly during operation due to the pulsating oil pressure. Observe the minimum bending radius.

### 步骤 5

相应选择软管和接口螺栓连接。发送器和接收器之间允许的软管最大程度为 2000 mm。根据发送器尺寸确定软管的额定宽度。根据油的流动情况调整软管尺寸（参见第 50 页）。

可根据下压速度使用小于标称标准额定宽度的软管额定宽度（参见表 4）。

将发送器和接收器装入模具可大大减轻确定合适软管长度时的工作量。

必须防止锐缘和外界作用对软管造成损坏。运行过程中，软管会由于油压脉动而发生少量移动。必须遵守最小弯曲度。

# Cam Unit Compact Cam 60 kN with gas monitoring connection

接收器  
紧湊型模具滑阀 60 kN  
带气体监控接口

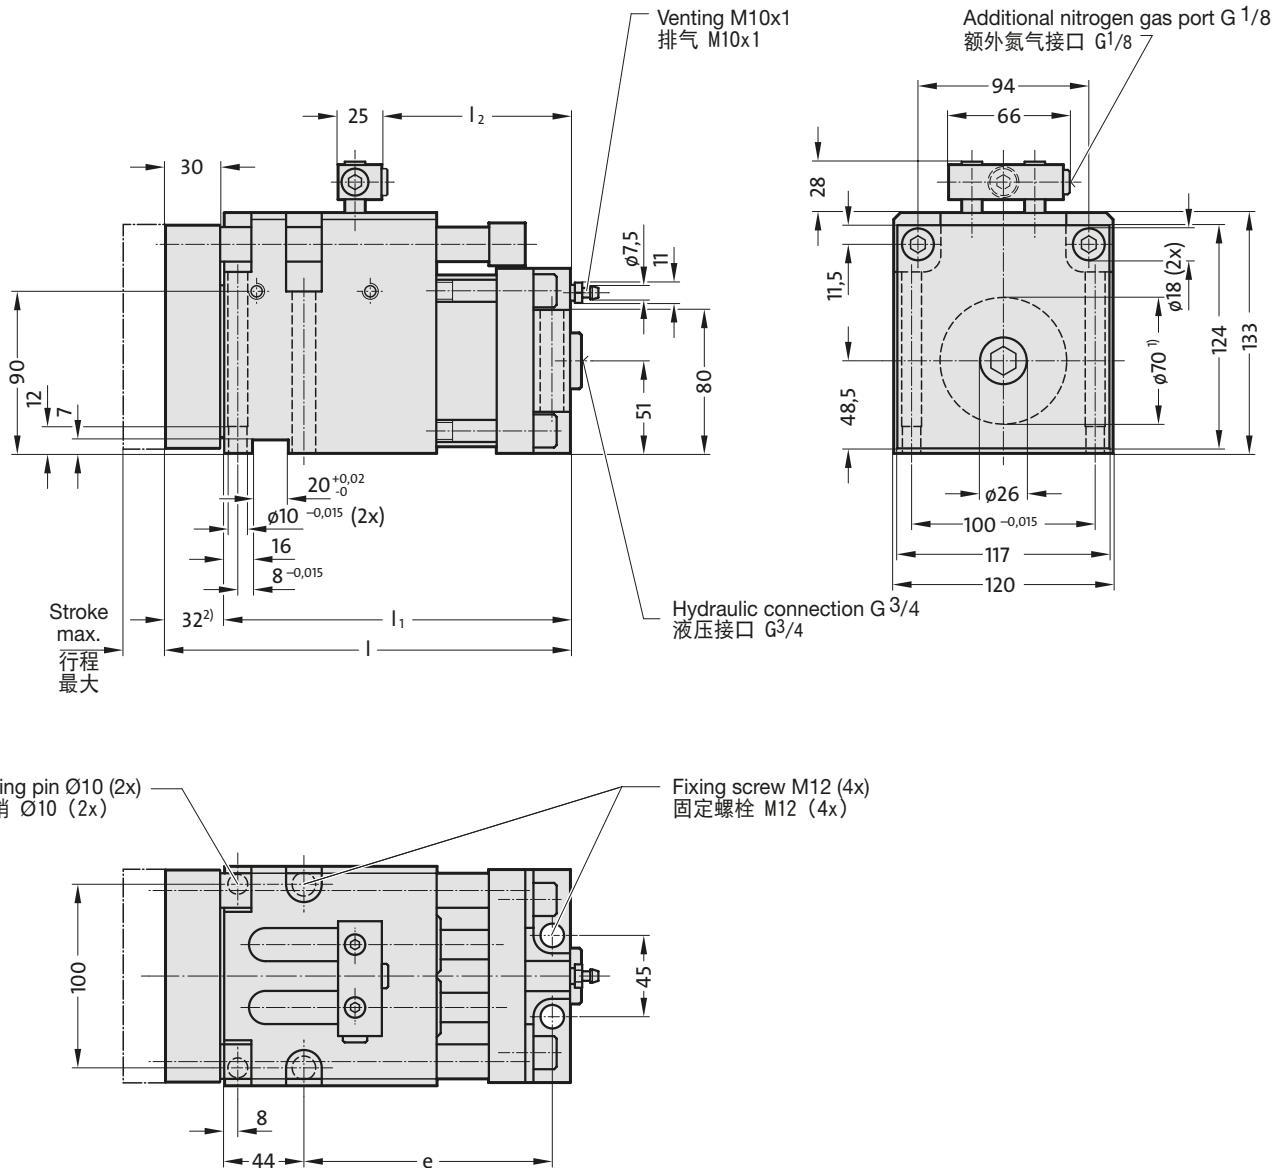

2018.11.06000. \_\_\_\_ .1

Install together with measuring hose and control fitting (gas spring and nitrogen connection are valveless).

Duplicate nitrogen gas ports for connecting the measuring hose.  
Use only one port whilst keeping the other one closed.

配合测量软管和控制配件使用（空气弹簧和氮气接口均无阀门）。

有两个氮气接口可用于连接测量软管。  
仅使用其中一个接口（另一个保持封闭）。

## Note:

- The punch should preferably be mounted in the middle of the piston rod. It can also be located in the shaded area if necessary. A guide bolster with external guide to absorb the lateral forces should be provided for coping and cutting operations.
- The cam unit no longer returns completely to its stroke starting position due to the oil expansion which is attributable to the temperature. An allowance must be made for an increase of 3 mm to 6 mm.

## 提示:

- 首先将冲头置于活塞杆的中间。必要时，可将冲头置于标记范围内。执行剪切和切割操作时，必须配备一个外部导向装置，以便吸收产生的侧向力。
- 由于油膨胀受到温度限制，因此，接收器不会完全返回至其行程初始位置。必须考虑增加 3 mm 至 6 mm。

## Note!

The pressure can be set at both valves. We recommend setting the low pressure valve to 25 bar. The high pressure valve can be set to a maximum of 180 bar. The value to be set depends on the operational requirements.

## 提示!

可在两个阀门上调节压力。我方建议将低压阀设置为 25 bar。  
高压阀可最高设置为 180 bar。设置值取决于所执行操作的需求。

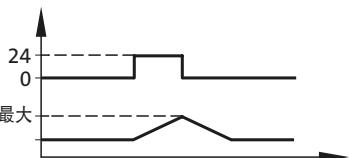

## Technical specifications – hydraulic system

## 技术参数 – 液压系统

Oil tank volume / 油储罐容量	15 l
Hydraulic oil ISO VG 32 液压油 ISO VG 32	DIN 51524 HVLP (or similar) DIN 51524 HVL (或同类产品)
Min. flow at 180 bar 180 bar 时的最小容积流量	1,6 l/min.
Max. flow at 25 bar 25 bar 时的最大容积流量	8,7 l/min.
Oil pressure when extending and retracting 驶入和驶出时的油压	10-20 bar
Oil pressure during operation 操作过程中的油压	max. 180 bar 最大 180 bar
Low and high pressure valves 低压和高压阀	(see note) (参见提示)

Control signal 24 V – DC  
控制信号 24 V – DC

Cam unit  
(working unit)\*\*  
接收器 (工作单元)\*\*

## Cam speeds\* 接收器速度\*

Size of cam 接收器尺寸	When extending and retracting (Low pressure phase) 驶入和驶出时 (低压阶段)	during operation (high pressure phase) 操作过程中 (高压阶段)
2018.11.01500.	115 mm/s	21 mm/s
2018.11.04000.	47 mm/s	9 mm/s
2018.11.06000.	29 mm/s	5 mm/s
2018.11.09000.	18 mm/s	3 mm/s
2018.11.15000.	12 mm/s	2 mm/s

\* The table shows the approximate speeds of one cam unit connected to an electric hydraulic pump. If several cam units are connected to an electric hydraulic pump to obtain the speed of each, divide by the number of cam units.  
Example: 3 x 2018.11.01500.024 : 115 mm/s = 38 mm/s

\*\* The control signal (24 V DC) triggers extension of the piston rod and the gas overpressure in the cam unit causes retraction.

\* 表中所示为连接至电子液压泵的单个接收器的安全速度。如果将多个接收器与一个电子液压泵相连，则必须将速度除以接收器的数量。  
示例: 3 x 2018.11.01500.024 : 115 mm/s = 38 mm/s

\*\* 通过控制信号 (24 V DC) 激活活塞杆 驶出，  
通过接收器 (工作单元) 内产生的气体超压驶出。

## Filling and Control Fitting, Filling hose Charging Adapter

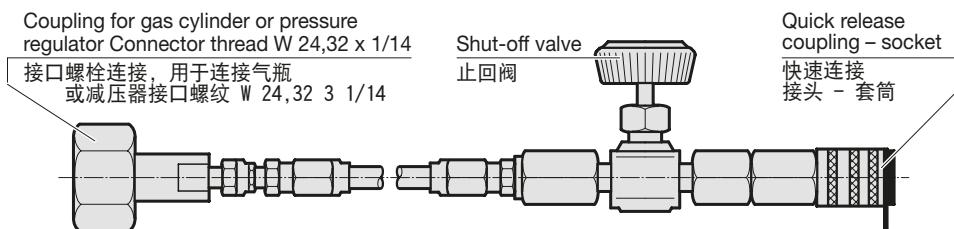

# 发送器-接收器系统-附件

## 加注和控制配件， 加注软管加注适配器

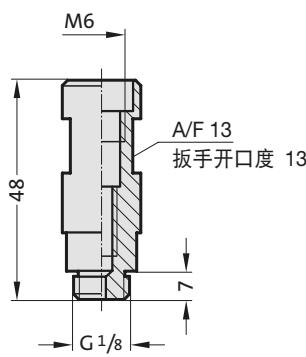

### 2480.00.32.21 Filling and control fitting / 加注和控制配件

### 2480.00.31.02 Filling hose / 加注软管

### 2480.00.32.11 Charging adapter / 加注适配器

#### Description:

The filling and control fitting 2480.00.32.21 is used to fill, vary the pressure setting (e.g. when testing tools) and measure the gas pressure.

The coupling enables the filling hose to be connected directly to the gas cylinder valve or the pressure regulator.

If the fitting is used solely for checking purposes, a simplified arrangement not connected to the gas cylinder is also possible.

Closing the shut-off valve of the filling hose enables the fitting to be used to measure the charging pressure in the accumulator / Cam Unit, without detaching the hose.

For constant gas monitoring, we recommend connecting a control fitting 2480.00.30. or 2480.00.31.

The adapter which is required for filling the power/cam units (2480.00.32.11) comes as standard with the filling and control fitting (2480.00.32.21).

#### Note:

2480.00.31.02 Filling hose 2 m long with quick release coupling, shut-off valve and gas bottle connector (order separately).

Other filling hose lengths to order.

#### 说明：

加注和控制配件 2480.00.32.21 可用于加注、用于调整压力设置（例如，测试模具时）及用于测量气体压力。

使用加注软管的接口螺栓连接可将其直接连接至气瓶开关阀或减压器。

如果仅将配件用于检查，则可采用无需气瓶接口的简化排列方式。

通过关闭加注软管的止回阀，可在不安装软管的情况下使用配件测量蓄压器/接收器中的加注气体压力。

建议连接控制配件 2480.00.30. 或 2480.00.31. 以便永久监控气体情况。

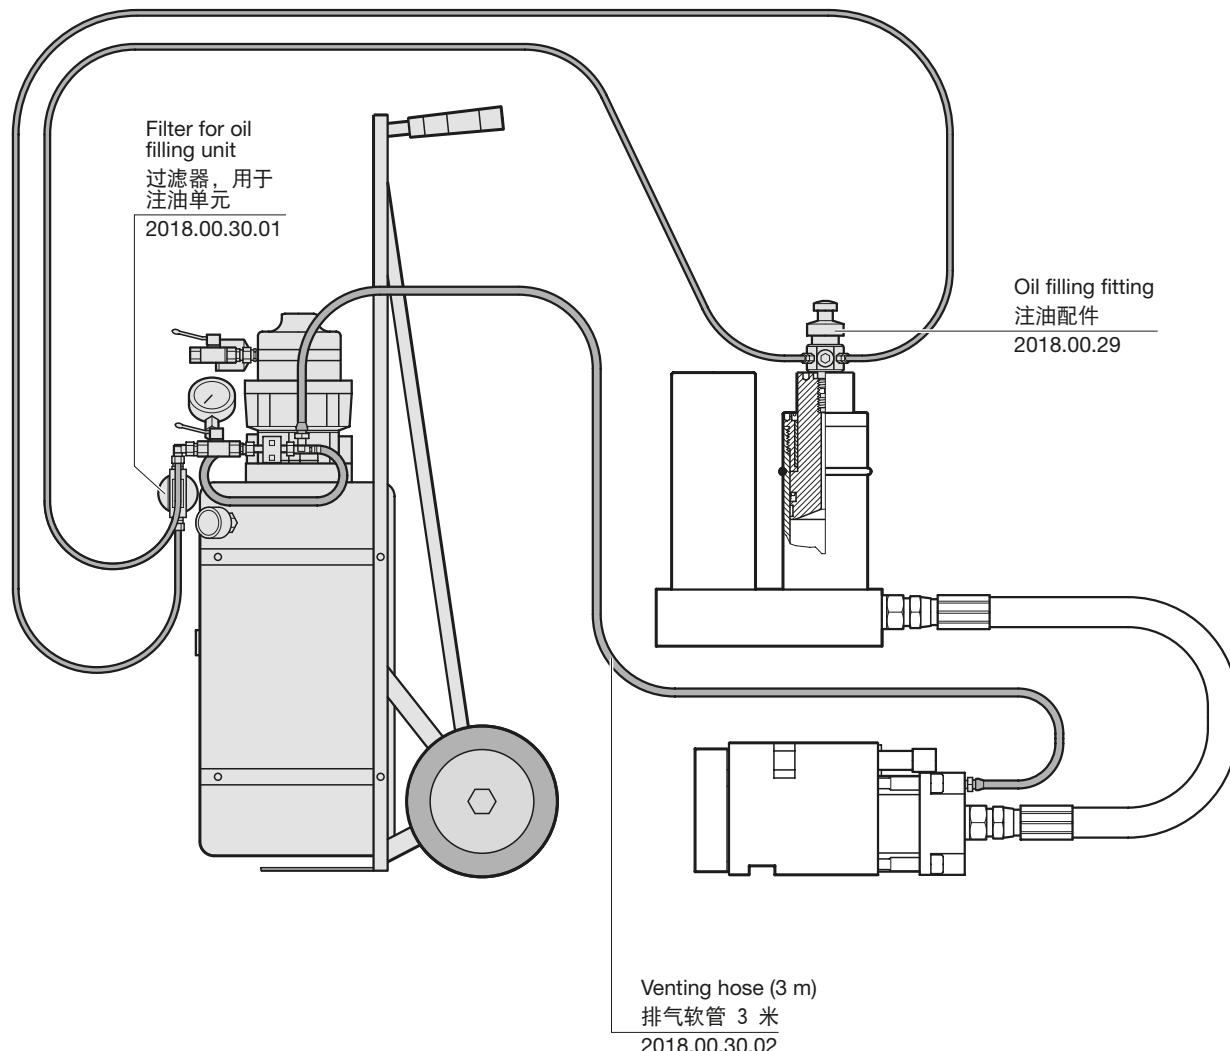

供应加注和控制配件 (2480.00.32.21) 时将搭配加注发送器和接收器时需要的适配器 (2480.00.32.11)。

#### 提示：

2480.00.31.02 加注软管 (2 m 长，带快速连接接头、止回阀和气瓶接口) 需另行订购。

可根据要求供应其他长度的加注软管。

2018.00.30 Oil filling unit / 注油单元

#### Scope of supply: 供货范围：

Filter 过滤器	2018.00.30.01
Venting hose 排气软管	2018.00.30.02
Oil filling fitting 注油配件	2018.00.29

#### Description: 说明：

The oil filling unit 2018.00.30 is used to fill the system with hydraulic oil DIN 51524 HVLP ISO VG32.

注油单元 2018.00.30 用于为系统加注液压油 DIN 51524 HVLP ISO VG32。

#### Order no 订货编号

280.37.032.01 ( 1 Liter / 升)	Hydraulic oil UNIVIS N 32 液压油 UNIVIS N 32
280.37.032.05 ( 5 Liters / 升)	Hydraulic oil UNIVIS N 32 液压油 UNIVIS N 32

Precise instructions on filling the system with oil and gas are given in the user manual supplied with the system.

随附的用户手册中将详细说明为系统加注油和气体的方法。

- 2480.00.30.01 without pressure switch, without pressure relief / 无压力开关且无防爆装置  
 2480.00.30.02 with pressure switch, without pressure relief / 带压力开关但无防爆装置  
 2480.00.30.03 without pressure switch, with pressure relief / 无压力开关但带防爆装置  
 2480.00.30.04 with pressure switch, with pressure relief / 带压力开关和防爆装置

#### Description:

The control armature 2480.00.30.01/03 serves to control the charge pressure of up to eight connected gas springs. Pressure checks during operation can be effected in two ways:  
 a) by visual monitoring of the gauge dials  
 b) automatically, by means of diaphragm pressure switch 2480.00.15.  
 The switch will stop the associated machine as soon as the charge pressure drops below the value set.

#### Note:

The shut-off valve may be open or closed during operation. The closing of the pressure gauge shut-off valve ensures that no pressure peaks from the gas spring act on the pressure gauge.

\* 2-m filler hose with rapid coupling and connector for gas bottle Order No. 2480.00.31.02 (to be ordered separately)

#### 说明:

控制配件 2480.00.30.01/03 用于尺寸监控一个或多个蓄压器/接收器 (可配 8 个接口) 的 加注压力。使用过程中, 可采用双重方式执行压力检查。  
 a) 通过目视监控压力指示器。  
 b) 通过膜片压力开关自动监控。该开关会在压力下降时关闭机器或触发信号。

#### 提示:

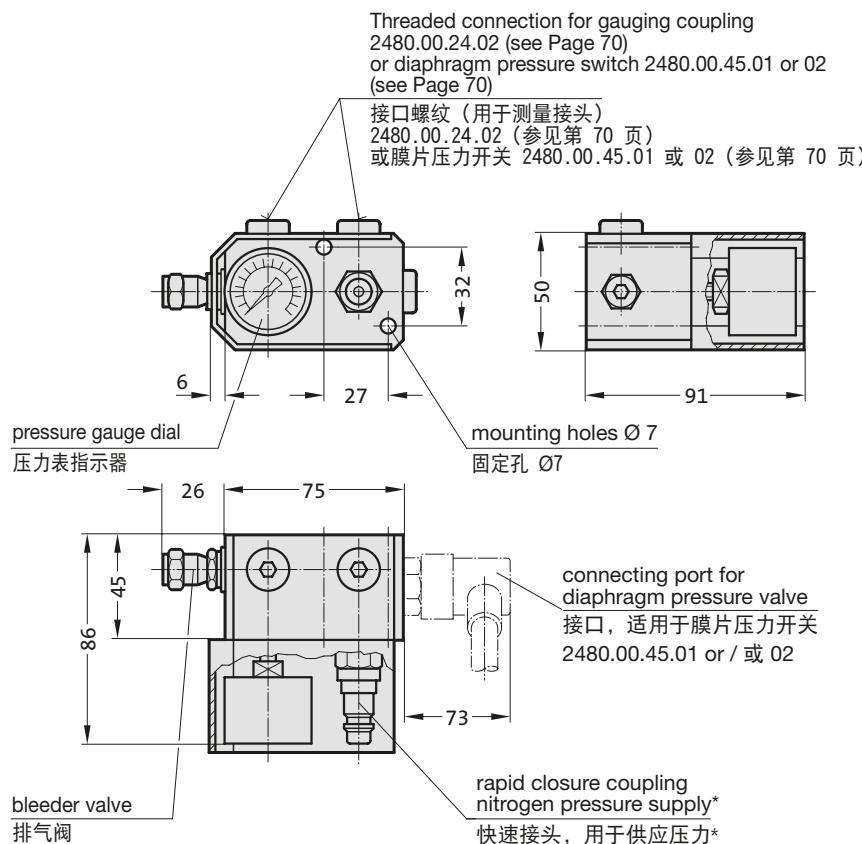

可在运转过程中关闭或打开止回阀。通过关闭压力表止回阀可排除气体压力的动态压力脉动 作用于压力表

\* 带快速锁闭接头和 贮气瓶接口 的 2 m 长 加注软管 订货编号: 2480.00.31.02 (另行订购)

 2480.00.31.07 without pressure switch, with pressure relief / 无压力开关但带防爆装置

**Description:**

The control armature 2480.00.31.01 performs the same function as the control armature 2480.00.30.01.

**Note:**

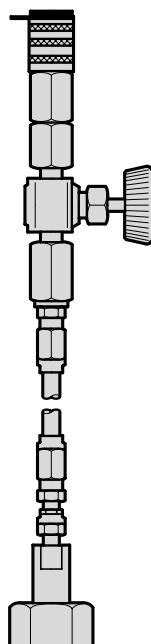

\* 2-m filler hose with rapid coupling and connector for gas bottle  
 2480.00.31.02 (to be ordered separately)

**说明：**

控制配件 2480.00.31.01 的功能与控制配件 2480.00.30.01 相同。

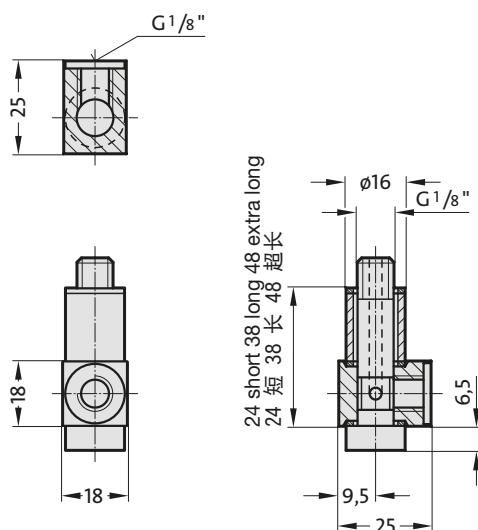

**提示：**

\* 带快速锁闭接头和 贮气瓶接口 的 2 m 长 加注软管 订货编  
 号：2480.00.31.02 (另行订购)

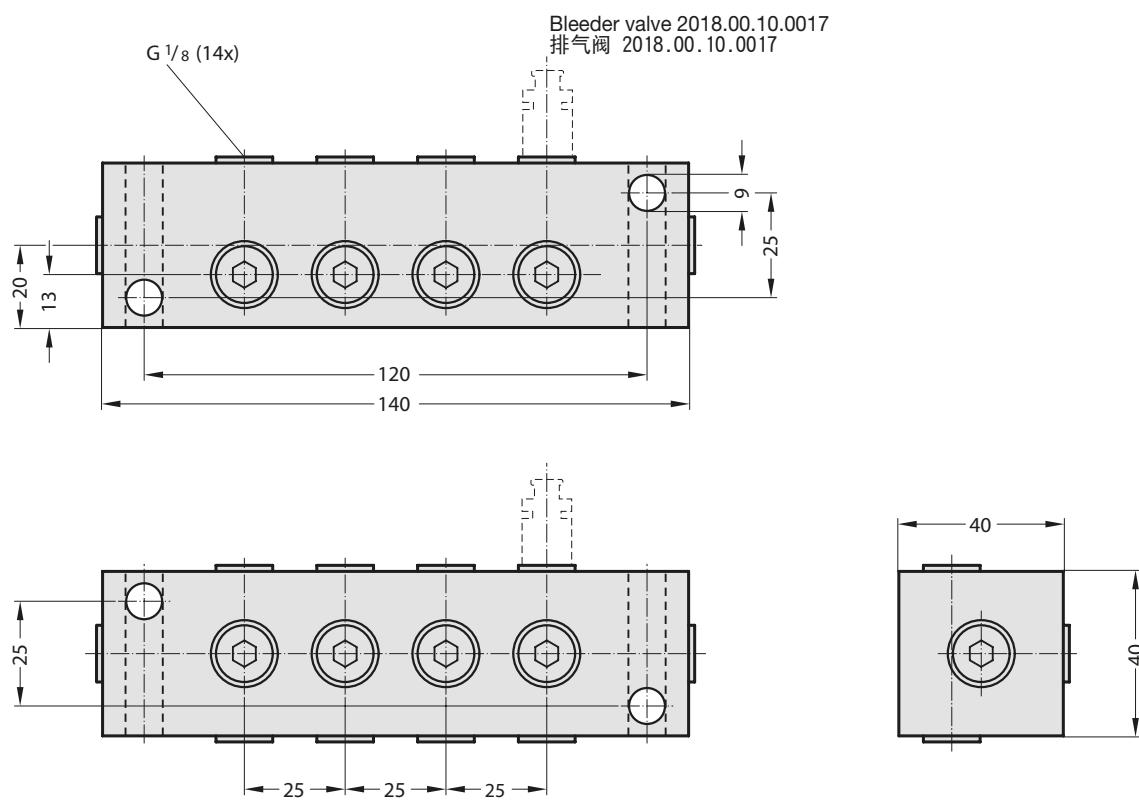

## Flex Cam Compound Threaded Joints

2480.00.24.16 long / 长  
 2480.00.24.17 short / 短  
 2480.00.24.18 extra-long / 超长  
 Simple adapters for connecting  
 Hydraulic Cams  
 用于连接工作气缸的简易适配器

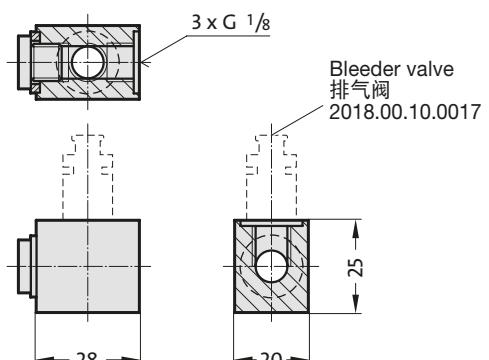

## 2480.00.24.33 Distributor / 分配器导向板

## 发送器-接收器系统 组合式螺栓连接

# **Typical Applications**

## **应用示例**

Application: Cutting with Compact Cam 使用紧凑型模具滑阀打孔的应用情况

This example shows how a compact cam (1) can be used for punching holes. The punch can be mounted directly to the Compact Cam, which means that no additional guides are required in the tool. The diagram shows that the Power Unit does not have to be installed in the vicinity of the Cam Unit, making it much more flexible compared to conventional mechanical systems. We recommend fitting a stripping unit (2) to the punch.

#### Working sequence

When the top part of the tool moves down, it actuates the clamping pad (3) that holds the workpiece in position. The clamping pad is centred with respect to the bottom part of the tool by conical spacers. Once the clamping pad reaches its position, the Power Unit is actuated (4) and the Cam Unit executes its operation.

本示例介绍将紧凑型模具滑阀（1）用于打孔的方法。可将冲头直接安装于紧凑型模具滑阀，因而无需在模具中安装额外的导向装置。图示表明无须将发送器安装在接收器附近。因此，其灵活性比传动的机械式解决方案更高。建议在冲头上安装清扫器（2）。

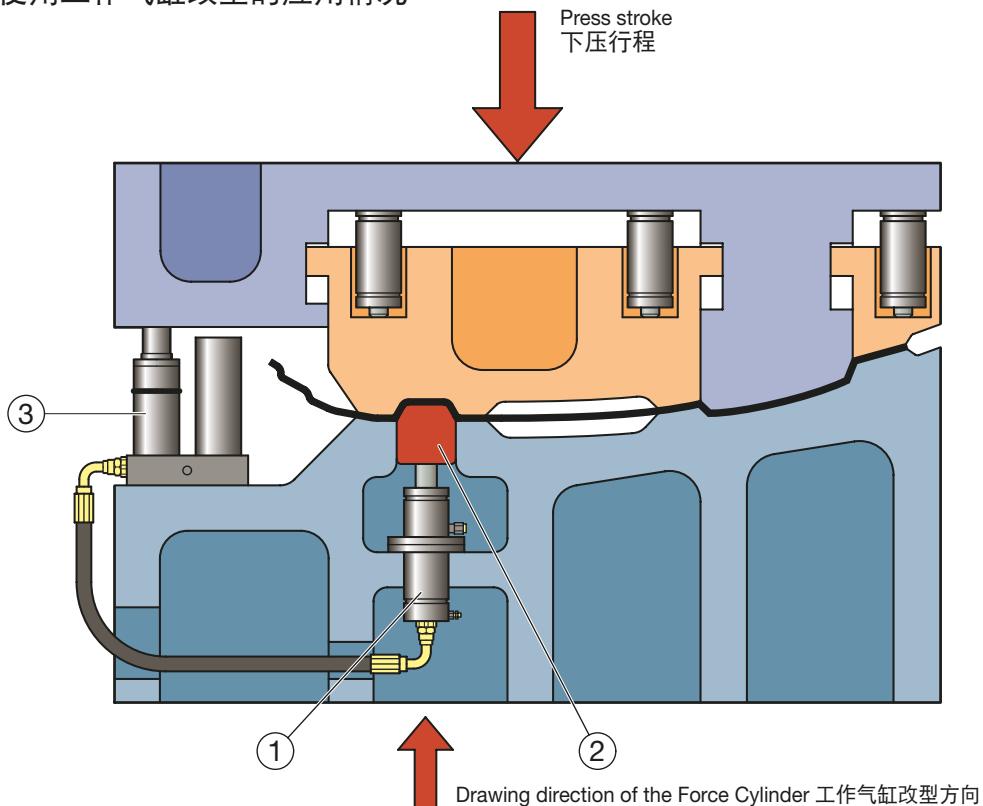

#### 工作流程

当模具上部向下移动时，将激活压紧装置（3）并将工件保持在其位置。借助圆锥形隔片将压紧装置对准模具底部的中心。如果压紧装置达到其位置，则将激活发送器（4）且接收器执行其工作操作。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Metal forming  
使用工作气缸改型的应用情况

This example shows how one or more Cam Units (1) can be used to drive embossing punches (2) (or tool slides) in a machine tool. The punch (or slide) is guided in the tool. This method of driving tool components allows considerable flexibility in the machine tool layout. The Cam Unit only generates the motion and force. Only shearing and tensile forces are permitted.

### Working sequence

As the top part of the tool moves down, it actuates the clamping pad that holds the workpiece in position. When the clamping pad reaches its position, the Power Unit is actuated (3) and the Cam Unit executes its operation. The embossing force can be adjusted, if necessary, by varying the pressure in the Accumulator.

本示例介绍如何使用一个或多个接收器 (1) 驱动模具中的压印冲头 (2) (或模具滑阀)。在模具中导向冲头 (或滑阀)。该模具组件驱动方式实现了模具结构的高灵活性。接收器仅提供移动和力。仅允许推力和拉力。

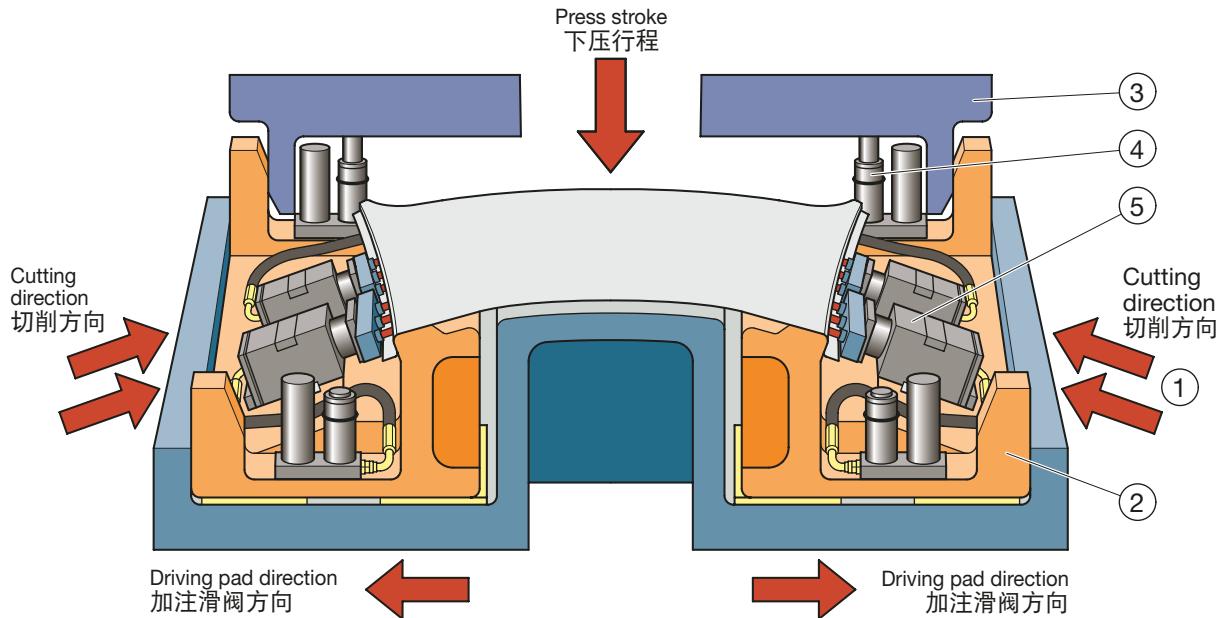

### 工作流程

模具上部的向下移动激活压紧装置，而压紧装置则将工件保持在其位置。如果压紧装置达到其位置，则将激活发送器 (3) 且接收器执行其工作操作。如需要，可通过改变蓄压器中的压力调整印压力。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Cutting with positioning of the overflow wedge  
使用超程楔定位装置打孔的应用情况

12 holes are punched at a negative angle (1). In this tool, the Flex Cam is equipped with mechanically-driven filling slides 2).

### Working sequence:

The filling slide (2) is first moved into position, controlled by the overflow wedge (3). As the press descends further, the four Power Units (4) are pressurised, causing the Cam Units (5) to punch the holes.

In this arrangement, the hole punching operation requires no other drivers, which means that it can easily be performed at an angle of 90° to the workpiece.

按照负角 (1) 打出 12 个孔。在该模具中为发送器-接收器 系统配备了机械驱动的加注滑 阀 (2)。

### 工作流程:

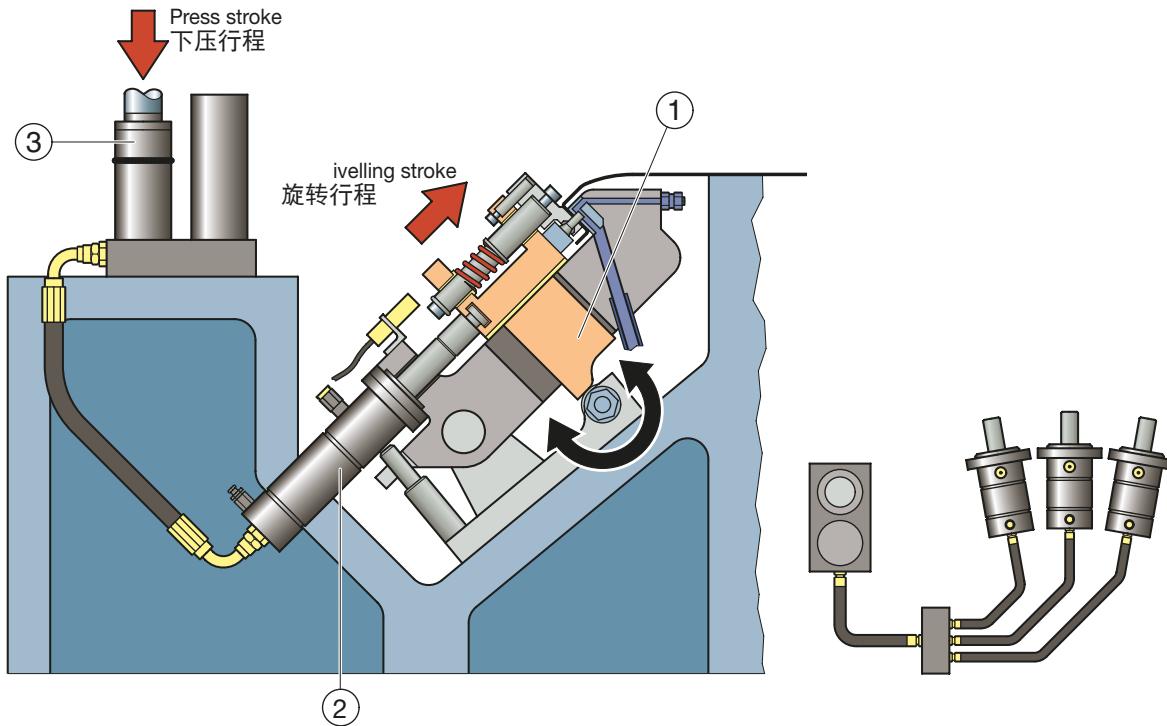

首先，通过超程楔控制装置 (3) 将加注滑阀 (2) 送入位置。继续下压过程时将向四个发送器 (4) 施压，从而激活接收器 (5) 开始打孔。

如果使用该解决方案，则在打孔操作时无需任何传动齿轮，进而能够按与工件成 90° 角的方式顺利完成打孔操作。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Punching holes with a swivelling die  
使用可旋转底模打孔的应用情况

6 holes are punched at a negative angle using working cylinders that drive a shearing punch unit (1).

### Working sequence:

The diagram shows the Flex Cam in its end position (press at bottom dead centre). As the working cylinder (2) starts to move back, the punch moves out of the punching area. The entire shearing punch then swivels down so that the workpiece can be removed. The operation is reversed when the top part of the press down descends once more.

The tool contains two systems: one on the left and the other on the right. Each system consists of a Power Unit (3) that drives three Cam Units.

使用可驱动旋转式冲裁凸模  
单元（1）的工作气缸按负角打出 6 孔。

### 工作流程:

图中所示为位于终端位置的发送器-接收器系统（压力机位于底部顶点）。

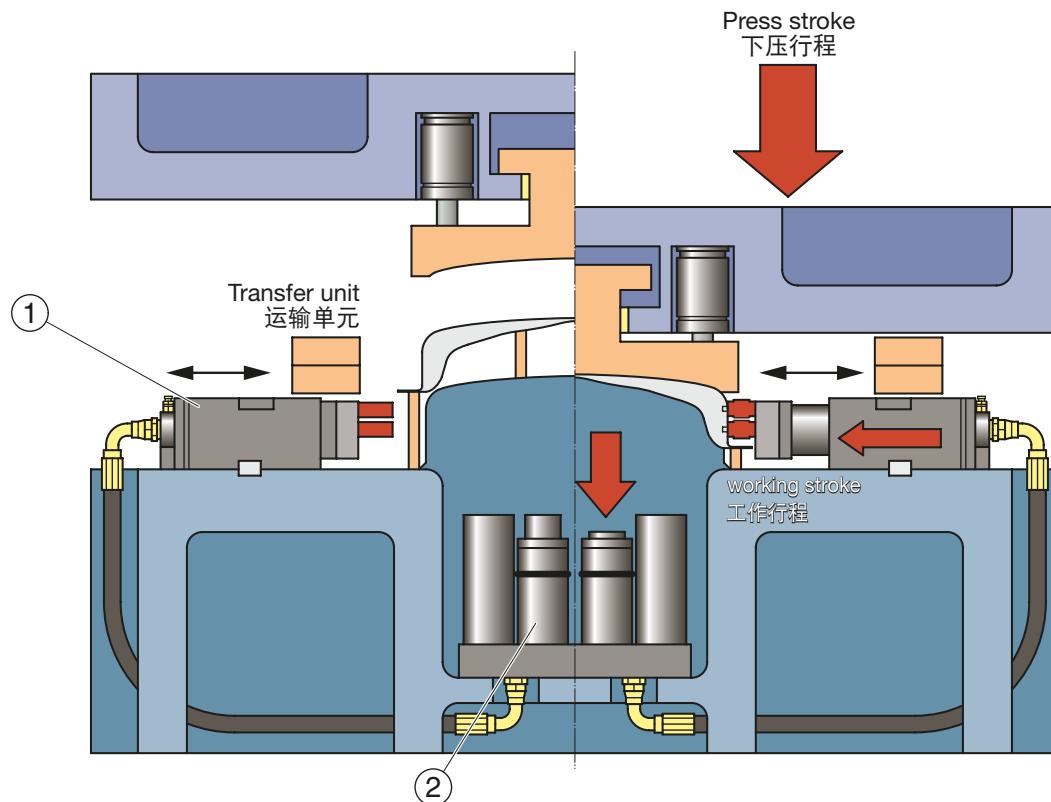

如果工作气缸（2）开始返回，则冲头从打孔部位驶出，随后，整个冲裁凸模单元向下旋转，从而可取出工件。但压力机上部再次下降时，即开始相反的工序。

模具中配有一套系统，一套位于左侧，一套位于右侧。每套系统均由一个可驱动三个接收器的发送器（3）构成。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Punching holes with a Flex Cam Stroke ratio 1:2.5  
使用发送器-接收器行程比打孔的应用情况 (1:2.5)

This tool produces two workpieces at the same time: one on the right and the other on the left. On the left-hand side of the diagram, the press is at the top dead centre position. On the right-hand side, the press is at the bottom dead centre. The transport grippers can be seen above the Cam Units.

The workpiece must be shaped before the holes are punched in the sides.

The machining contour requires a relatively large distance between the blank and the punching unit.

### Working sequence:

A small Cam Unit (1) is connected to a larger Power Unit (2) in order to guarantee the necessary time/traverse sequence. This results in a stroke ratio of 1 to 2.5.

Example: If the Power Unit stroke is 10 mm, then the Cam Unit stroke will be 25 mm.

在模具中同时制造两个部件（一个在左，一个在右）。  
图示中左侧为顶部顶点中的压力机。右侧所示为底部顶点中的压力机。

接收器单元的上方可看到运输抓斗。

侧面打孔前，必须执行工件成型。由于模具成型轮廓的原因，板金零件与打孔单元之间需要留出相当大的间距。

### 工作流程：

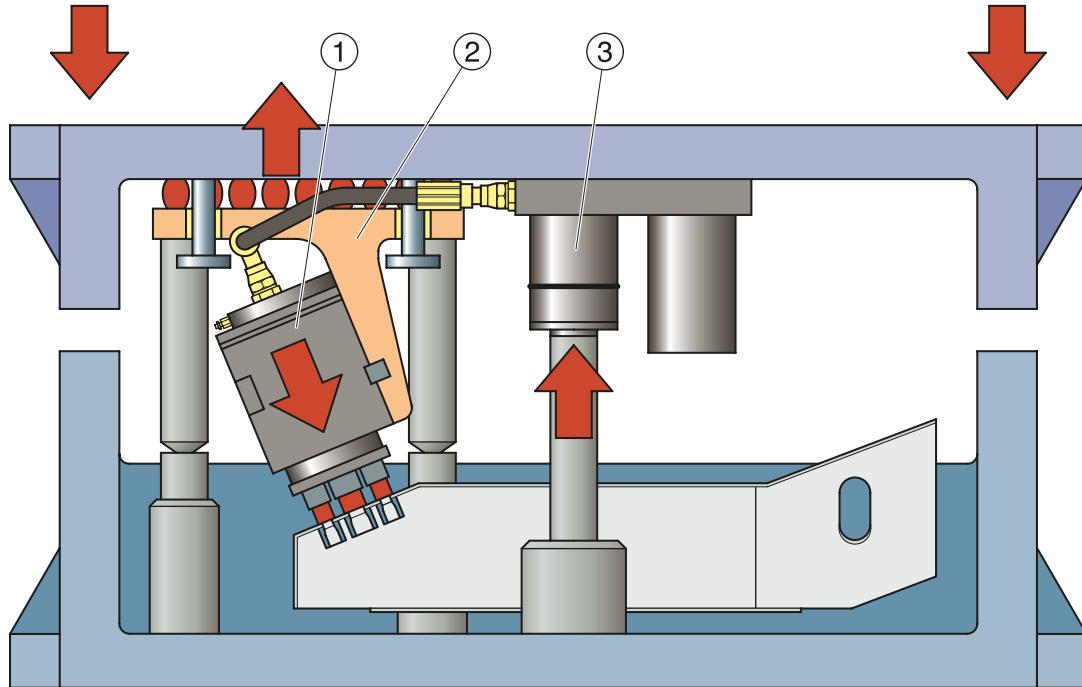

为了保障所需的时间-距离过程，应将尺寸较小的接收器(1)与尺寸较大的发送器(2)相连。由此产生系数为2.5的行程比。

例如：如果发送器行程为 10 mm，则接收器行程 = 25 mm。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Cutting with floating suspension and conical spacers  
使用浮动悬挂装置和楔形隔片打孔的应用情况

This application uses a Flex Cam that is suspended from above (in the top part of the tool).

### Working sequence:

The Cam Unit (1) is mounted on a floating die (2). The floating die is spring-mounted and is centred with respect to the bottom part of the tool by conical spacers. As the press moves down and the floating die is centred, the Power Unit (3) is activated and the holes are punched.

Before the Flex Cam was installed, the holes were punched vertically using oval forming punches.

Due to the improved production output and quality that resulted from installing the Flex Cam, the system paid for itself (including installation) within just three months.

该应用时，将使用悬挂在上方（安装在模具上部）的发送器-接收器系统。

### 工作流程:

将接收器（1）安装在浮沉模（2）上。浮沉模采用弹性安置并使用楔形隔片将其对准模具底部的中心。当压力机向下移动并对准浮沉模时，将激活发送器（3）并带动打孔器。

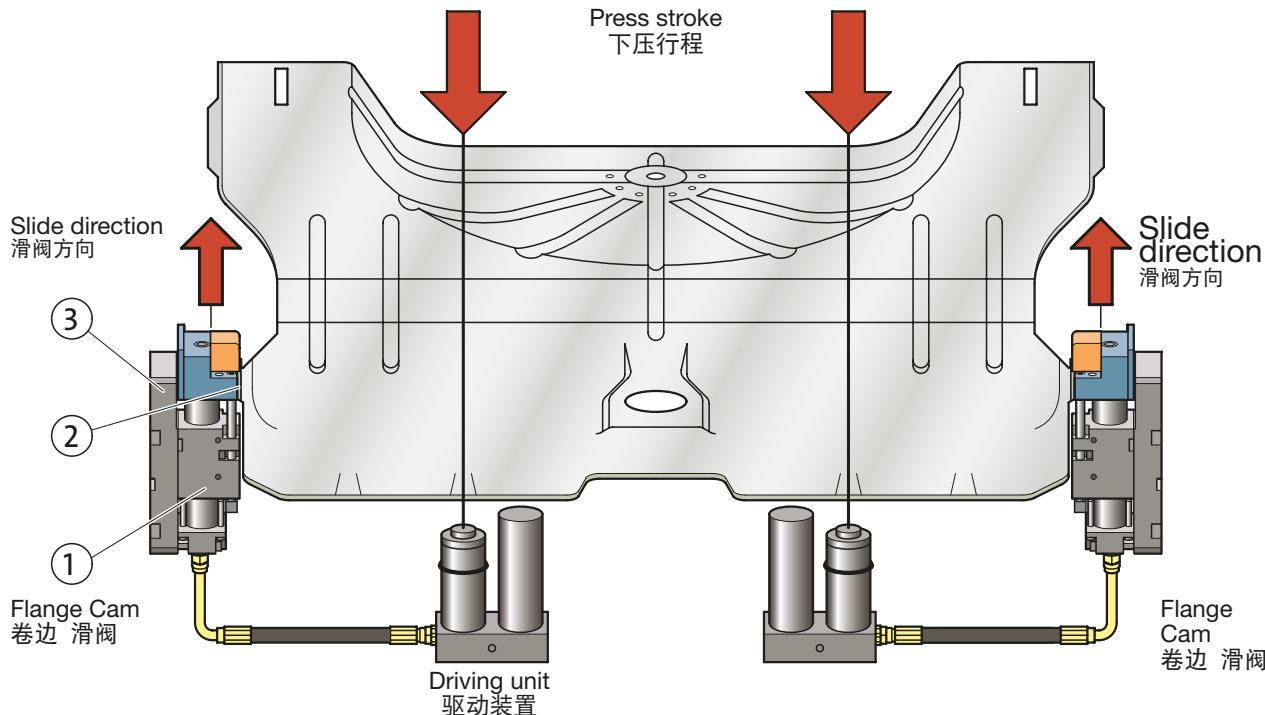

安装发送器-接收器系统前，打孔器使用椭圆成型冲头垂直打孔。

由于安装发送器-接收器系统可明显改善生产情况和质量，因此，在安装后的三个月内即可回收系统的全部成本。

## Flex Cam Typical Applications

Application: Bending  
使用卷边滑阀竖起的应用情况

## 发送器-接收器系统 应用示例

The diagram shows a base plate which is used in the Flex Cam (1) to cant (bend up) lateral tabs (2).

### Working sequence:

The bending punches fixed to the Cam Units (in this case Flange Cams) are supported at the sides (3). These supports absorb the severe lateral forces resulting from the bending operation.

Without this system, it would have been necessary to produce an entire new tool with a floating die or to introduce a second operation.

图中所示为底板，此时的发送器-接收器系统（1）被用于为侧面连接板（2）卷边（竖起）。

### 工作流程：

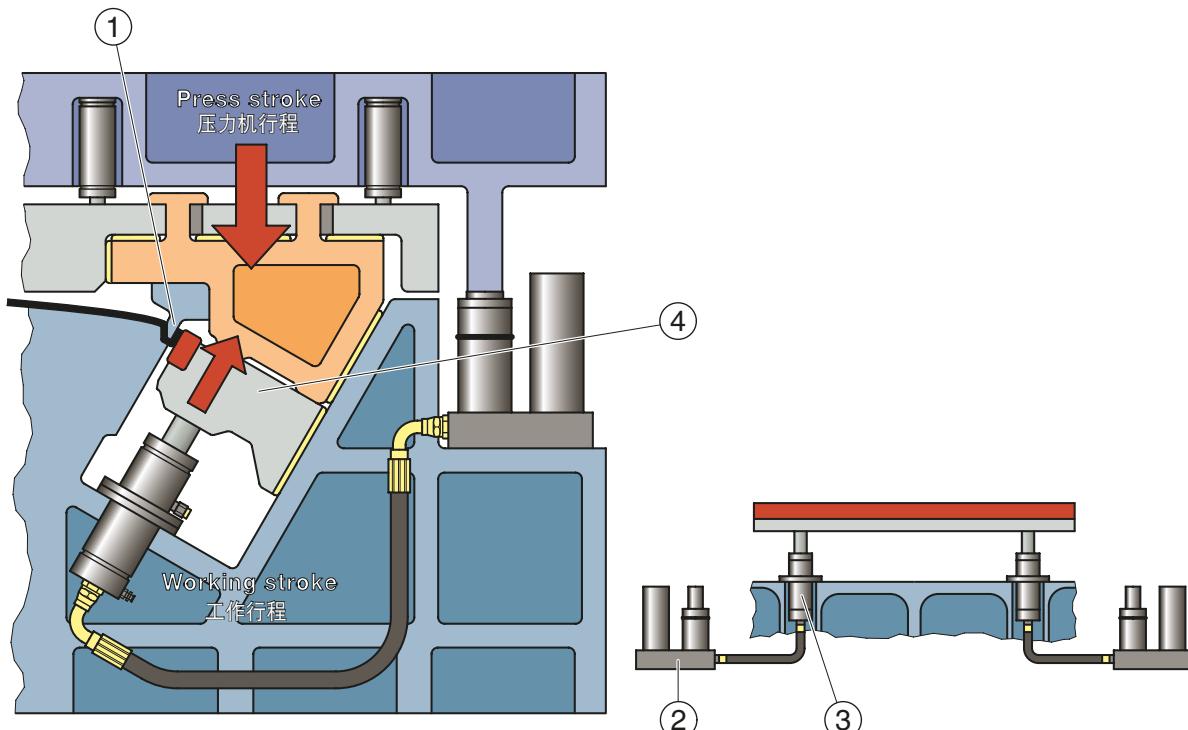

固定在接收器（此处为卷边滑阀）上的卷边或竖起模具收到侧面（3）支承，以便吸收因弯曲过程产生的强大侧向力。

否则，必须使用浮沉模制造 全新模具或设置第二项工作过程。

## Flex Cam Typical Applications

## 发送器-接收器系统 应用示例

Application: Bending – slide driven synchronously  
竖起应用情况 – 同步驱动滑阀

This tool has two Force Cylinders for driving an 800 mm wide bending punch.

### Working sequence:

As can be seen from the diagram, the blank is bent (1) at an angle, against the motion of the press.

Two separate Flex Cam to synchronise the motion of the bending punch. Each system consists of a Power Unit (2) and a Force Cylinder (3).

The bending punch (4) is guided in the tool. As a result, the Force Cylinders only absorb axial forces.

Use of the Flex Cam simplified the structure of this tool, thus reducing the machinery costs.

该模具使用两个工作气缸驱动 800 mm 宽的弯曲冲头。

### 工作流程:

如图所示, 将按照与下压移动相反的角度执行竖起 (1) 工序。

为了确保竖起导向板同步移动, 应使用两套独立的发送器-接收器系统。每套系统均由一个发送器 (2) 和一个工作气缸 (3) 构成。

在模具中导向导向板 (4), 以便工作气缸仅会吸收轴向力。

通过使用发送器-接收器系统可简化模具结构, 进而降低成本。

## FIBRO - your production partner

*FIBRO – an internationally successful company. As a market leader in Standard Parts, Rotary Indexing Tables and Automation, FIBRO provides products and solutions to ensure your production keeps moving. So what is the secret of the FIBRO success? Products developed in-house, tailor-made for the market with uncompromising quality.*

*But good products are not enough on their own. FIBRO combines excellent products, the know-how and service competence of an internationally focused company, matched to the actual needs of customers – wherever they are.*

Hassmersheim plant / Hassmersheim 工厂

FIBRO 是一家成功的国际企业。  
作为标准间和旋转台领域的领头企业, FIBRO 凭借其产品和  
解决方案确保您的生产始终正常运转。  
以市场为导向的产品、由总公司主导的研发和制造, 以及无可  
挑剔的品质共同构成迈向成功的基石。

但良好的产品只是其中一个方面。  
FIBRO 将其与其他方面相结合: 其将自身杰出的产品、技术,  
以及国际化的售后服务与服务业务与地区合作伙伴的特定知  
识融为一体。

## FIBRO – 您的生产伙伴

### Standard Parts

Today the Standard Parts Division operates from the Hassmersheim and Weinsberg works, which manufacture a comprehensive range of standard parts and maintain stocks ready for immediate despatch world-wide. The machine tool, mechanical engineering and systems engineering product ranges have been developed to meet the needs of customers.

They include steel die sets, guide elements, oilless guide elements and precision components such as punches and matrixes, special steel compression springs, gas springs, forming materials, metal bonding agents, moulding resins, peripheral equipment for pressing and tool making, tool slides with cam or roller slides and hydraulic cam systems.

FIBRO has become renowned world-wide for its comprehensive range of products in stock and its readiness to deliver.

### 标准件

Hassmersheim 和 Weinsberg 的工厂主要负责生产各类标准件。大量的标准件产品在这里生产、存储并发往全球各地的客户。

产品范围适用于模具、成型、机械及设备制造方面的客户。

其中包括:

钢制冲压模座、导向元件、免维护滑动元件、精密部件  
(如冲裁凸模和切削衬套)、钢制特种压力弹簧、空气弹簧、成型材料、金属粘合剂和铸模树脂、压力机和模具制造的外围设备, 以及带楔子、滚轮或液压传动装置的模具滑阀。

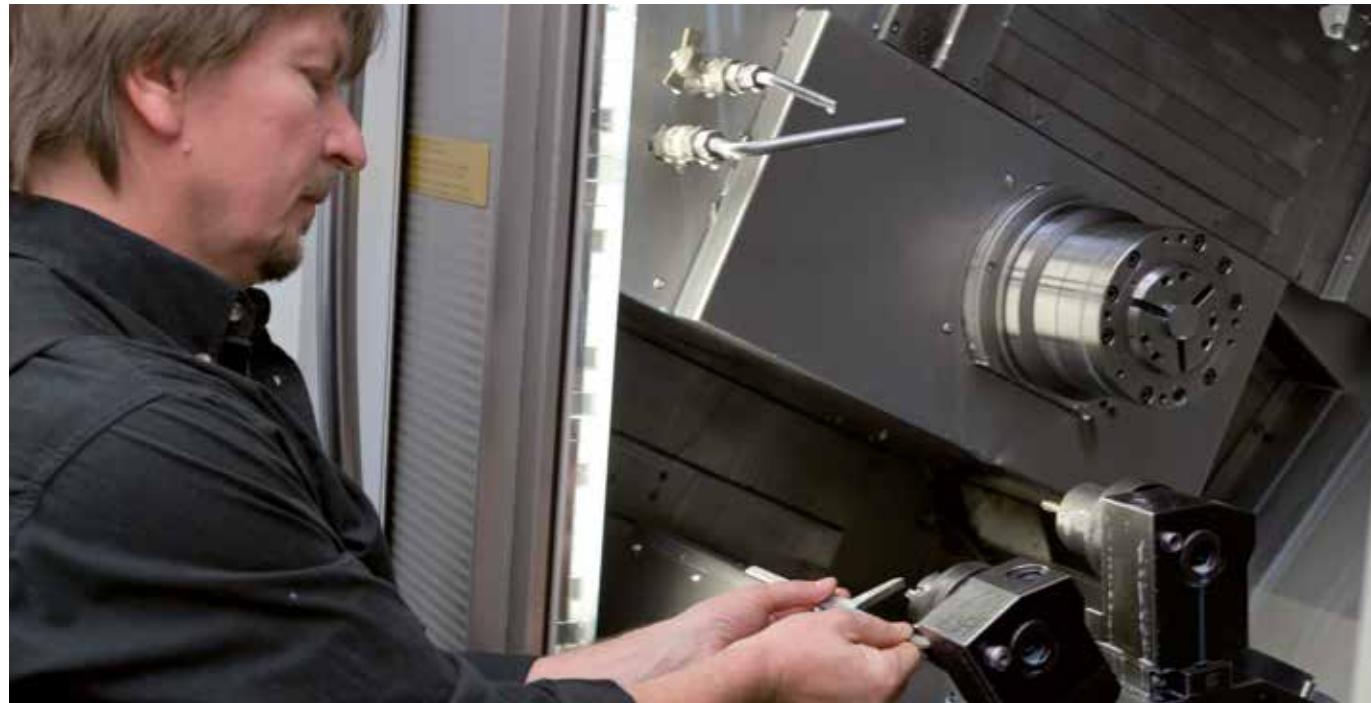

FIBRO 凭借其种类繁多的仓储及迅速快捷的供货能力成为了全球同行业中的标杆。

## FIBRO - your production partner

*FIBRO is customer-focused – world-wide. A well-developed network of sales and service points and strategic partners ensure that help is always at hand. This ensures technical advance, world-wide experience in applications and rapid availability of products.*

*Facts and figures on FIBRO:*

- founded 1958
- approximately 770 staff
- more than 70 representatives and service stations world-wide
- branches in France, USA, India, Switzerland, Singapore and China
- ISO 9001:2000 Quality Assurance and VDA 6.4 certification

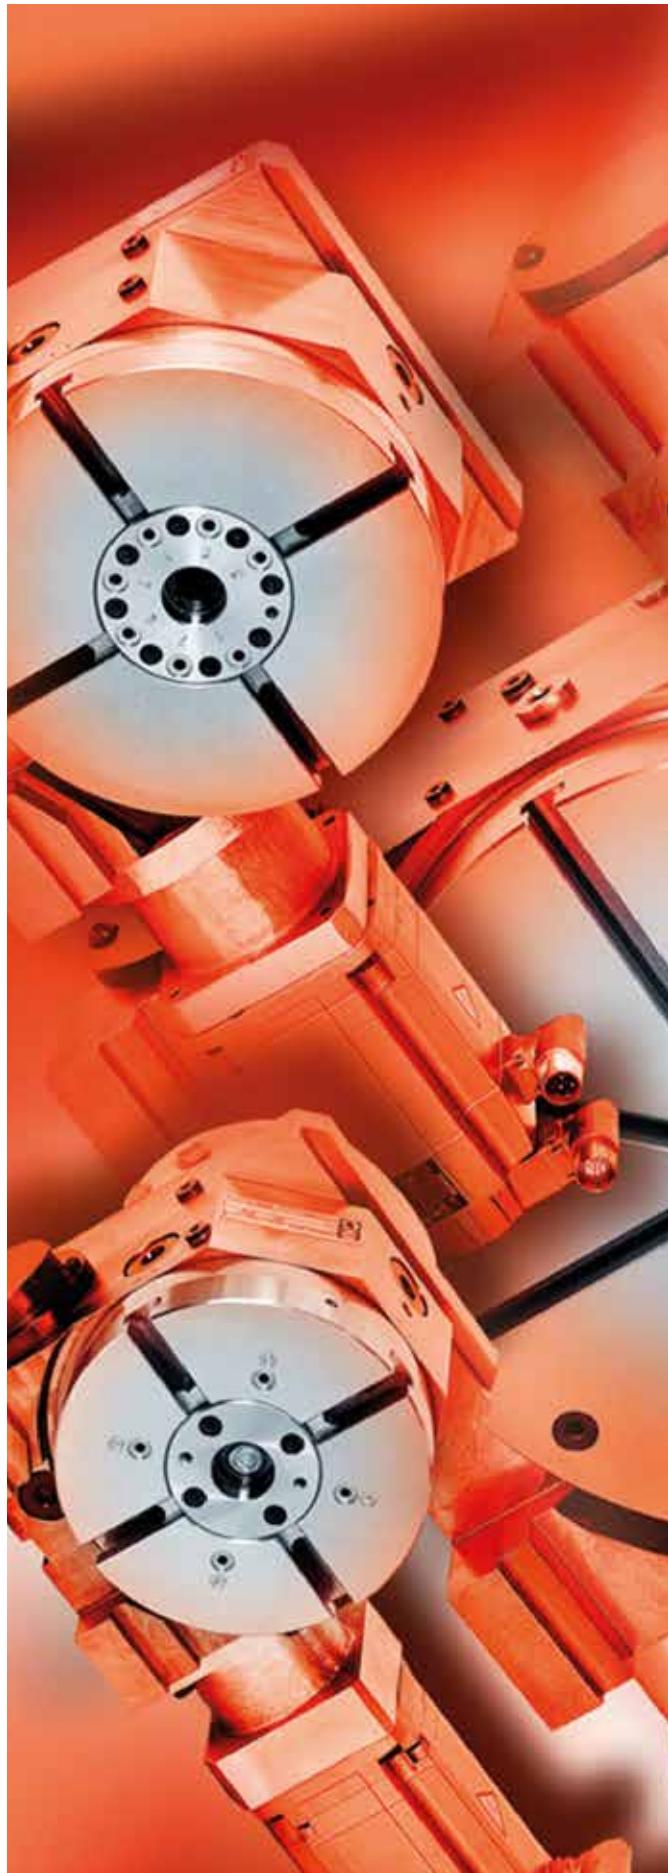

Precision parts manufacturing / 精密零件制造

因此, FIBRO 在全球范围内推广以客户为中心的服务。稠密的销售及售后服务网络, 以及战略合作伙伴则不断地提供贴近市场的服务。从而确保了技术上的进步、国际化的应用经验和产品的迅速可用性。

FIBRO GmbH 的数据与实际情况:

- 成立于 1958 年
- 约 770 名员工
- 在全球设立了超过 70 家代表处和售后服务合作伙伴
- 在法国、美国、印度、瑞士、新加坡、和中国设有分公司
- 经过 DIN EN ISO 9001:2000 和 VDA 6.4 认证

## FIBRO – 您的生产伙伴

### Rotary Tables

FIBRO – The worldwide pioneer in the field of rotary tables  
A comprehensive range of types:

FIBROTAKT® – Rotary indexing table with Hirth face gear

FIBROPLAN® – NC rotary table with worm drive

FIBRODYN® – NC rotary table with direct torque drive

FIBROMAX® – Heavy-duty NC rotary table with Twin Drive

FIBROTOR® – Electromechanical rotary indexing table for applications that do not involve machining

Rotary tables for all applications – from flexible workpiece positioning through rotary and multiple-axis machining to assembly automation

Used in all branches of industry – from the automobile industry through solar energy to machine tools

A wide range of sizes – from micro-machining to processing of very large parts

Customer-oriented design – from the standard modular table to customer-specific special solutions

### 旋转台

Weinsberg 工厂自 1962 年起就开始生产旋转台, 从而使 FIBRO 成为该方面备受亲睐的先行者。

丰富的型号:

FIBROTAKT® – 带端面齿 (Hirth) 平面啮合的圆形回转台

FIBROPLAN® – 带螺杆传动的 NC 旋转台

FIBRODYN® – 带力矩直接传动的 NC 旋转台

FIBROMAX® – 带双传动的重型负载 NC 旋转台

FIBROTOR® – 用于非切削应用的电子机械式旋转台

适用于各类应用的旋转台 – 从灵活的工件定位, 到倒圆加工和多轴加工, 乃至安装自动化

投身于各个行业 – 从汽车工业, 到太阳能技术, 乃至机床行业  
各类尺寸应有尽有 – 从微加工到大型部件制造

以客户为导向的规格 – 从模块化标准到客户特定的特殊解决方案
